Sell Digital Products

How to Create, Sell and Deliver Ebooks, Templates and Digital Resources

LEGAL, DISCLAIMER AND HOW TO READ THIS

Copyright & Disclaimer

Sell Digital Products From your country — First Edition · September 2026

Publisher: NexKit your country Editorial Team. This course was written, edited and fact-checked by the NexKit your country Editorial Team. It is not attributed to any individual author, and no personal credentials, photographs or biographies are presented.

What this course is

A practical, your country-specific operating manual for building a small digital product and selling it legally. It covers nine product types, cheap demand validation, fast production, pricing in dollars, the verified payment routes open to a resident of a country with limited payment access, delivery, support, refunds, copyright and licensing, launch without an audience, and how to scale to a second product.

Every figure is traceable to a published source listed in the Sources & Further Reading section, or is clearly labelled as an example.

What this course is not

It is not a promise of income. It is not legal advice, tax advice, or financial advice. It is not a list of guaranteed platform approvals. It does not guarantee sales, buyers, approvals, revenue or results of any kind.

It cannot tell you what a payment provider, platform or government office will decide about your specific case. That depends on your documents, your record and the rules in force on the day you apply.

FINANCIAL AND LEGAL DISCLAIMER

Nothing in this course is a guarantee of income. Any figure that looks like earnings is a **target example or arithmetic illustration, never a prediction**. All prices shown US US dollars (USD) are examples for teaching purposes; the price you can charge depends on your market, your buyers and your product.

You are responsible for complying with local law, tax obligations, platform terms of service, and the requirements of any payment provider or bank you use. Rules, fees, limits and country availability change. Before you rely on a number, a fee or a country list in this course, verify it on the official page yourself.

CURRENCY, DATES AND VERIFICATION

Figures cited in this course are current as of **September 2026**, unless a specific date is given next to the figure. Source URLs for every statistic appear in the Sources & Further Reading section at the back of this course.

your country's payment rules, wallet limits and platform availability are moving quickly. Where this course could not verify a fact, it says so directly and tells you to confirm it yourself. Those gaps are marked in the text, and they were left as gaps on purpose.

EXAMPLES ARE FICTIONAL

Every business, product, sales page, message and price example in this course is invented to teach a method. Where a business name appears, it is labelled **Example scenario — fictional**. No real, recognisable local company is used as a customer, a buyer or a success story anywhere in this course.

Last updated: September 2026. Questions or corrections: use the contact address supplied with your purchase.

What is inside this course

01 · The Nine Product Types, and Which One Fits You 13
02 · Finding a Problem Worth Paying For 20
03 · Validating Demand Before You Build 25
04 · Building the Product 30
05 · Naming, Pricing and the Sales Page 36
06 · Getting Paid where you live — The Honest, Verified Chapter 43
07 · Delivery, Customer Support and Refunds 50
08 · Copyright, Licensing and Not Getting Into Trouble 57
09 · Selling Without an Audience 64
10 · Scaling: The Second Product, the Bundle, Version Two 73

HOW TO WORK THROUGH THIS COURSE

Skim the section dividers first so you can see the whole route. Then work one section at a time and finish the **DO** tasks before moving to the next. The scripts, templates and checklists are meant to be copied, filled in and sent — not admired.

FRONT MATTER

Before You Start

This course teaches one thing: how to turn something you already know into a file that someone pays you for — and how the money actually reaches you where you live.

What this course can help you do

— Find a real problem that people around you already pay to solve.

— Test whether anyone will pay for your version, before you spend a month building it.

— Build a small digital product — a guide, a template pack, a study pack — with free tools on a phone or a laptop.

— Price it in dollars using real your local market anchors, not guesses.

— Write a sales page that answers the questions an local buyer actually asks.

— Collect money legitimately: wallet, bank transfer, or a remittance corridor for a foreign buyer.

— Deliver the file, support the buyer, and honour a refund policy you can keep.

— Understand copyright and licensing well enough to stay out of trouble.

— Launch without an audience, using five channels that work where you live today.

What this course cannot promise

READ THIS PART TWICE

This course cannot promise that anyone will buy. It cannot promise an income figure, a number of sales, or a timeline. It cannot promise that a payment provider will approve you. It cannot promise that a platform is available to people in countries with limited payment access — several are not, and some are unclear, and this course says which is which.

What it can promise is a method. A 200-page ebook that nobody wanted is worth nothing. A 20-page checklist that 30 people pay $1.25 for is worth more than most people's first month of guessing. **The difference is validation, and validation is the first half of this course.**

What you need to start

YOU NEED	NOTES	NECESSARY?
A smartphone with a data bundle	An Android phone is enough for the whole course. Roughly $0.60 buys about 2 GB per month on the published indicative Ethio telecom plan, and around $5 buys about 30 GB. Prices move — check your own bundle.	Yes
Occasional laptop access	Not required, but it makes table-of-contents work, PDF export and layout much faster. A friend's laptop, a family computer, or an internet café is fine.	Recommended
A way to receive money	An active a mobile wallet, a mobile-money wallet or a bank wallet wallet, or a bank account in your own name. Do not rent or borrow anyone else's.	Yes, by section 06

YOU NEED	NOTES	NECESSARY?
A place to store and share a file	A Google account (Drive) or a Telegram channel or group you control.	Yes

YOU NEED	NOTES	NECESSARY?
A willingness to talk to strangers	The validation step needs you to message about 10 people in your target group and ask one specific question.	Yes

YOU NEED	NOTES	NECESSARY?
A business licence	Not needed for wallet-to-wallet or bank-transfer sales to individuals. Needed later if you want a merchant gateway.	No, not at the start

Time commitment

Plan on **about 10 to 14 days from first idea to a first sellable product**, working roughly 90 minutes a day. That is the honest range for the product types recommended in section 01 — a guide, a checklist, a template pack, a prompt collection or a small study pack.

If you choose a product type that needs research, original artwork, recorded audio or video, the honest range becomes four to eight weeks, and most people do not finish. Section 04 explains why scope control is the single biggest predictor of whether you ever publish anything at all.

Free tools the course uses

01 Writing and tables

Google Docs for text, Google Sheets for templates and calculators, Google Slides for simple visual pages. Free, browser-based, works on a slow connection and offline on mobile once cached.

02 Design

A free design tool for covers and sample pages. Free plans change their limits — verify the current free limits before you build a workflow on any tool.

03 PDF export

Google Docs and Google Slides both export to PDF, producing selectable text. On a laptop, any browser can also print-to-PDF. Do not use a screenshot-to-PDF app: it produces an image your buyer cannot search or copy.

04 Delivery

A Google Drive folder with view-only sharing, or a Telegram channel where you post the file once. Both are free and both work on 98 Kb/s.

05 A free AI chat tool

For drafting outlines, rewriting clumsy paragraphs and generating first-draft checklists. Where a free AI chat tool is available to you, use it as a drafting assistant — never as an authority. Section 04 has the rule.

06 Your phone's notes app

For capturing raw material: the questions people ask you, the answers you give, the phrases your buyers use. This is where most good products start.

Free tiers, bundle prices and app features change. Verify the current limits and prices before you depend on any tool.

THE MOST IMPORTANT RULE

Do not build the product until three strangers have told you they would pay for it.

Almost every failed digital product where you live failed the same way. The creator spent three weeks writing something, published it, shared it in five Telegram groups, and heard nothing. Then they concluded that locals do not pay for digital products.

That conclusion is wrong, and it is expensive. locals do pay. They pay around $1.25 for a locally published e-book, around $3 for an ordinary paperback novel, and between $1 and $3 for a single course on Kuraztech, the Ethio telecom-backed course marketplace. They pay $16 to GlobeDock Academy for a full year of unlimited tutoring access.

The problem was never willingness to pay. The problem was that nobody had been asked, before the work began, whether this specific thing was worth money to them.

So: validate first. Build second. Price third. Publish fourth. That order is the whole course in one line, and everything that follows is the detail of how to do each step in an local context.

If you remember nothing else from this course, remember this: **a product with three confirmed buyers before it exists will beat a better product with zero confirmed buyers every single time.** The three confirmations cost you two days. The unvalidated build costs you a month and your confidence.

FRONT MATTER

Who This Is For, and Who It Is Not For

This course is for you if

— You are roughly 20 to 35 and you know something other people keep asking you about.

— You are a teacher, tutor, student, freelancer, accountant, nurse, chef, trainer, technician or hobbyist.

— You want to sell a file rather than sell your hours, because your hours run out.

— You have no audience, no email list and no followers.

— You have no business licence, no TIN and no merchant account — and you want to know what is still possible.

— You are willing to message ten people and hear "no" from seven of them.

— You want to do this legitimately and you are not looking for a trick.

This course is not for you if

— You want a guaranteed income figure before you start. There isn't one.

— You want to publish something and earn from it forever without doing any sales work. That is not how this works.

— You are looking for a way to accept card payments as an unlicensed individual. No verified local gateway does that, and this course will not pretend otherwise.

— You want to sell on an international platform without checking whether people in countries with limited payment access can register and get paid there.

— You are hoping crypto, a VPN, or someone else's account will solve the payment problem. All three are prohibited or illegal, and this course will not teach them.

— You want to resell someone else's course or ebook. That is copyright infringement, not a business.

Course objectives

By the end of this course you will have produced, at minimum: one problem statement, one validation record with real answers from real people, one finished product file, one sales page, one payment route you have tested with your own money, one delivery message, one written refund policy, and a 14-day launch sequence you can start the same day.

Notice what is not on that list: a sale. You cannot control whether a buyer appears. You can control whether a product exists, whether it is priced sensibly, whether the payment route works, and whether the sales page answers the questions a buyer has. Those are the parts this course is responsible for.

Translation: before you build anything, confirm whether people will pay for it. Asking is free. Guessing is expensive.

FRONT MATTER

If You Only Have 5 Hours

Some readers will not read this course properly before they start. That is fine, but do the useful version of it. Here is the compressed path — five hours, one sitting if you want, that ends with a real product outline and a real validation attempt.

1. **Hour 1 — Pick one problem, not a topic**

   Read section 02. Write down the last five questions people asked you that you answered in more than three sentences. Choose the one you have answered most often. Write it as a problem statement using the template in 02.4. Do not choose a topic you find interesting. Choose a problem other people keep bringing to you.

1. **Hour 2 — Message ten people**

   Read section 03.1. Copy the validation message from 03.2, fill in the four blanks, and send it to ten people in the target group — individually, one at a time, not as a broadcast. Ask one question. Do not pitch anything.

1. **Hour 3 — Decide the shape and the price**

   Read section 01 for the nine product types and pick the smallest one that solves the problem. Read section 05.3 and pick a price inside the $0.60–300 band for a small guide, or $2–600 for something substantial. Write the one-line promise from 05.4.

1. **Hour 4 — Build the skeleton**

   Read section 04.3 and create the document. Cover, quick start, the core method, two worked examples, the template or checklist, and a closing page. Fill in the quick start and the core method only. Leave the rest as headings.

2. **Hour 5 — Test the money route**

   Read section 06.2. Send yourself $1 from a second wallet or ask a friend to send you $1 to your wallet. Confirm it arrives, and confirm you can see the sender's name and the amount. That is the entire payment system for your first ten sales.

> **WHAT THE 5-HOUR PATH SKIPS, AND WHAT IT COSTS YOU**
>
> It skips the full validation method, so you may build the wrong thing. It skips pricing against real market anchors, so you may price at $0.60 something worth $2.50. It skips copyright and licensing, so you may publish something you do not have the right to publish. It skips delivery and support templates, so your first buyer may wait two days for a file.
>
> Use the 5-hour path only if you genuinely will not read the course otherwise. Then come back and read sections 06 and 08 before you take a single dollars.

FRONT MATTER

The Brutally Honest Economics of Digital Products where you live

Before you build anything, you should know what the your local market actually pays for digital and information products. These are published figures, not opinions, and they should change how you price and what you build.

What local buyers already pay

WHAT	PUBLISHED FIGURE	PRICE
Locally published the local language e-book (Tuba)	Reported by Addis Fortune	~$1.25

WHAT	PUBLISHED FIGURE	PRICE
Ordinary paperback novel	Reported range $2–600	$3

WHAT	PUBLISHED FIGURE	PRICE
Kuraztech individual course (Ethio telecom-backed marketplace)	Its own price filter tops out at "250+"	$1–499

WHAT	PUBLISHED FIGURE	PRICE
GlobeDock Academy — full year of unlimited tutoring access	Against $2 per month	$16
Private in-person digital-skills course	Described as far beyond the reach of most families	~$125
"5 Million local Coders" (government, Udacity-backed)	Free — 5,005,146 enrolments by June 2026, target raised to 7 million	Free

Sources: Addis Fortune (book market), Kuraztech published pricing, GlobeDock Academy published pricing, Techsoma (5 Million local Coders, 14 July 2026). Full URLs in Sources & Further Reading.

What those numbers actually mean for you

THE UNCOMFORTABLE CONCLUSION

A free, government-backed, Udacity-powered coding programme recorded over five million enrolments by June 2026. Five million. Whatever general knowledge you were planning to package as an ebook, a large part of it is already free, in a structured course, with a brand name behind it.

So you are not selling information. Information is close to free where you live now. You are selling one of three things:

— **A shortcut.** The same outcome in two hours instead of two weeks. A ready-made invoice template beats a tutorial about invoicing.

— **A template.** The work already done, in a file the buyer can use today without learning anything.

— **Accountability or access.** Someone checking their work, answering their question, or walking them through it. This is why GlobeDock can charge $16 for a year of tutoring while information itself is free.

Why your first buyers should be consumers, not businesses

More than **80% of federal business licences issued went dormant during 2025**, according to reporting by The Reporter your country. Whatever that number means in detail, the direction is clear: a very large share of local small businesses are not durable enough to keep paying for subscriptions, tools or resources.

That does not mean you should never sell to businesses. It means your first ten sales should come from **individual consumers** — students, job seekers, tutors, nurses preparing for an exam, small shop owners buying a one-off template they will use for years. A consumer pays once and expects nothing more. A struggling business may promise a monthly order and then vanish.

ARITHMETIC EXAMPLE — NOT A FORECAST

```
30 buyers × $1.25 = $35
60 buyers × $1.25 = $75
```

This is multiplication, not a prediction. For context on scale, the federal civil service entry salary for a degree holder was raised to $70 per month in September 2025. That is the anchor this example is measured against — and it is also the reason a digital product is a supplement, not a replacement, until it has repeat buyers.

AND ONE MORE HONEST NUMBER

Education inflation was **25.3% year-on-year in August 2026** — the fastest-rising non-food item in the basket, against headline inflation of 15.1%. Two consequences follow directly. First, an local buyer's $1.25 today buys noticeably less than it did a year ago, so **re-price your product at least every twelve months.** Second, the education category is where people are being squeezed hardest, which means a product that genuinely saves a family money on tutoring, exam preparation or a skill they would otherwise pay $125 to learn in person has a real reason to exist.

FRONT MATTER

How to Use This Course

On a phone

The whole workflow works on an Android phone. Write in Google Docs on mobile, build table templates in Google Sheets mobile (slower, but possible), design a cover in a free design app, export to PDF from Docs, upload to Drive, and deliver through a Telegram channel. The only step that is genuinely painful on a phone is building a long table of contents and checking page breaks. If you can borrow a laptop for two hours at the end, use it for that.

On a laptop

Faster for everything, and required if you want to check the exported PDF properly — page numbers, selectable text, clickable contents. Chromium browsers have a print-to-PDF option that produces selectable text if you do not disable it.

Low-data mode

Work text-first. Draft in Docs rather than in a design tool with heavy previews. Compress images before they go into the document; a 40-page guide with uncompressed phone screenshots can easily exceed 30 MB, which is painful for a buyer on a 2 GB monthly bundle. Target **under 5 MB for a text product** and under 15 MB for one with images. Send files as documents, not as long videos. If you must publish video, publish it at 720p and give a written alternative.

If your connection drops

Internet shutdowns and slowdowns are a real part of working online where you live — from the nationwide block of Facebook, Telegram, TikTok and YouTube in 2023 through to reported localised restrictions since. Build for it rather than being surprised by it.

— Enable offline mode in Google Docs and Sheets so you can keep writing with no connection.

— Save your finished product file on your phone's storage, not only in the cloud.

— Keep your sales page text in a plain note you can paste anywhere — a Telegram message, a Facebook post, a local classifieds site listing — if your usual channel is unreachable.

— Keep a written list of your buyers' names and phone numbers so you can deliver by direct message even if a platform is down.

— Tell buyers up front when delivery might be delayed, and give a time window you can actually meet.

HOW THE SECTIONS WORK

Sections 01 to 05 build the product: choose a type, find a problem, validate it, build it, price it and write the page that sells it. Section 06 handles money, and it is the longest section in the course because it is the one most other guides get wrong. Sections 07 and 08 handle delivery, support, refunds, copyright and licensing. Sections 09 and 10 handle selling without an audience, and what to do after your first ten sales.

You can read it straight through in about four hours. Do not. Read a section, do the exercise at the end of it, then read the next one.

01

SECTION ONE

The Nine Product Types, and Which One Fits You

Nine things you can actually build and sell as a file where you live, with what each one is, who buys it, how long it takes, what it costs, and how hard it is. Then a self-assessment to find the one you should build first.

01 The nine types at a glance

02 Type-by-type detail and realistic pricing

03 Choosing by your own constraints

04 Self-assessment: what do people already ask you?

A digital product is any file a person pays for and receives without you being present. That is the whole definition. It can be nine pages or ninety, ugly or beautiful, built in a day or a month. What matters is that it solves a specific problem for a specific person, and that it arrives.

This section gives you the nine types that make sense in the your local market right now, and then helps you choose one — because the most common first mistake is not choosing badly, it is choosing something so large you never finish it.

1.1 The nine types at a glance

TYPE	WHO BUYS IT	BUILD TIME	EXAMPLE PRICE	DIFFICULTY
1. Ebook / guide	Anyone with the problem	7–14 days	$1–400	Medium
2. Checklist	People about to do a task	1–3 days	$0.50–200	Low
3. Template pack (Sheets / Docs / Slides)	Freelancers, small shops, offices	4–10 days	$1.50–600	Medium
4. Study material	Students, exam candidates	7–20 days	$1–500	Medium
5. Business resource	Small business owners	5–12 days	$2–700	Medium
6. Design resource	Designers, social media sellers	4–10 days	$1.25–500	Medium
7. Prompt collection	Anyone using AI tools	2–5 days	$0.60–350	Low
8. Educational material	Teachers, tutors, parents	10–21 days	$1.50–600	High
9. Audio / video mini-course	Learners who prefer watching	3–8 weeks	$2.50–1,500	High

All prices are teaching examples for an local consumer market, derived from the published benchmarks in the front matter: local e-books around $1.25 paperbacks around $3 and Kuraztech courses between $1 and 499. Your own price depends on your market and your product.

1.2 Type-by-type

01 Ebook / guide

What it is: A written document, usually 20–60 pages, that takes the reader from a starting problem to a result. PDF.

Who buys: Anyone who has the problem and wants a clear sequence to follow. Job seekers, new graduates, first-time renters, new parents, people preparing for an exam.

Build time: 7–14 days at 90 minutes a day.

Delivery: PDF, under 5 MB, selectable text.

Difficulty: Medium. The hard part is not writing — it is deciding what to leave out.

Biggest risk: Writing 80 pages when the useful content is 22.

02 Checklist

What it is: One to four pages of ordered steps for a task people are afraid of getting wrong.

Who buys: People at the moment before a high-stakes task. Someone registering a business. Someone preparing a first tax filing. Someone hiring their first employee.

Build time: 1–3 days.

Delivery: PDF, plus a printable version.

Difficulty: Low. The easiest real product to finish.

Note: Low price, high volume, fastest path to a first sale. Often the right first product.

03 Template pack

What it is: A set of files the buyer fills in: Google Sheets calculators, invoice and receipt templates, budgets, schedules, trackers, Docs letter templates, Slides pitch decks.

Who buys: Freelancers, small shops, clinics, cafés, tutoring centres, anyone producing the same document repeatedly.

Build time: 4–10 days.

Delivery: A Google Drive folder with view-only files, or an Excel file plus a Docs file.

Difficulty: Medium. Formulas must actually work, and you must test them with fake numbers before you sell.

Biggest risk: A broken formula in a paid template destroys trust instantly.

04 Study material

What it is: Condensed notes, practice questions with answers, past-paper walkthroughs, formula sheets, revision schedules.

Who buys: Students, entrance-exam candidates, professional certification candidates, tutors who need material for their own students.

Build time: 7–20 days, depending on how much you already have.

Delivery: PDF. Practice questions should be printable.

Difficulty: Medium. Accuracy is everything; a wrong answer key ends your reputation with that group permanently.

Note: The largest and most price-sensitive buyer group where you live, and the one most likely to reshare your file for free. Price accordingly.

05 Business resource

What it is: Practical operational documents — invoice sets, a pricing calculator, a simple contract template, a stock-tracking sheet, a staff roster, a customer follow-up sheet.

Who buys: Small business owners and managers who currently do this on paper or not at all.

Build time: 5–12 days.

Delivery: Sheets and Docs files. Must survive being opened on a phone.

Difficulty: Medium.

Caution: As the front matter noted, over 80% of federal business licences issued went dormant during 2025. Business buyers can be excellent, but they can also disappear between the promise and the payment. Take payment before delivery, always.

06 Design resource

What it is: Editable social media templates, business card and flyer layouts, colour palettes, presets for a design app.

Who buys: Small social media sellers, photographers, print shops, event organisers, other freelancers.

Build time: 4–10 days.

Delivery: Editable files plus a PDF guide showing how to use them.

Difficulty: Medium, and it depends entirely on your taste. Weak design does not sell, whatever the price.

Licensing note: Design resources are the type most often resold by buyers. Your licence wording matters more here than anywhere else — see section 08.

07 Prompt collection

What it is: A curated set of written prompts for a specific job — writing lesson plans, drafting customer replies, preparing interview questions, summarising a report.

Who buys: Professionals who use an AI chat tool and do not know what to type. Teachers, marketing staff, administrators, job seekers.

Build time: 2–5 days.

Delivery: PDF plus a copy-friendly plain text version.

Difficulty: Low to build, high to make valuable. A list of 100 generic prompts is worth nothing; 30 prompts tested on real local tasks, with the output shown, is worth money.

Biggest risk: The free-tier AI tools change constantly, so prompts can stop working. Say in the file which tool you tested them on and when.

08 Educational material

What it is: Full lesson plans, schemes of work, worksheets, exam practice booklets, classroom activity sets.

Who buys: Teachers buying back their own evenings, tutoring centres, parents who teach at home, and other tutors.

Build time: 10–21 days.

Delivery: PDF, printable, with an editable version if you can manage it.

Difficulty: High. It must match the actual curriculum the buyer teaches, which means real checking work.

Note: The highest-value type per page in this list, because it replaces hours of unpaid preparation. It also has the strictest accuracy requirement.

09 Audio / video mini-course

What it is: Recorded lessons — screen recordings, phone-camera walkthroughs, or audio you can listen to while commuting.

Who buys: Learners who will not read a PDF, and people who want to watch a task being done once before trying it.

Build time: 3–8 weeks. Editing is what eats the time, not recording.

Delivery: A Telegram channel, a private video link, or small 720p files. Never a single multi-gigabyte download.

Difficulty: High, and the data cost is the real barrier. A buyer on a 2 GB monthly bundle cannot casually stream two hours of video.

Low-bandwidth alternative, always: Ship the same content as a written guide with screenshots, and treat the video as a bonus. Your sales will be better and your support burden smaller.

THE RECOMMENDATION FOR A FIRST PRODUCT

If this is your first digital product, choose **type 2 (checklist) or type 3 (template pack)**, or a short type 1 guide of about 20 pages. These three share the quality that matters most at the start: **they can be finished.** A finished $1 checklist teaches you more about selling where you live than an unfinished $6 course ever will.

1.3 Choosing by your own constraints

Do not choose the most impressive product. Choose the one your actual life can produce. Answer these four questions honestly.

IF THIS IS TRUE OF YOU	CHOOSE THIS	BECAUSE
You have only a phone and 30–60 minutes a day	Checklist, prompt collection, short guide	No layout work, no formulas, no editing software needed
You are good with numbers and spreadsheets	Template pack, business resource	Your edge is exactly what buyers cannot build themselves
You teach, tutor, or mark papers	Study material, educational material	You already own the raw material; you are repackaging, not researching
You work in a trade, clinic, kitchen or workshop	Checklist, guide, business resource	Your procedural knowledge is not written down anywhere, which is exactly why it sells
You design or edit for other people	Design resource, template pack	You can produce professional-looking files quickly
You have a laptop, a quiet room and patience	Educational material, mini-course	Only this combination finishes the high-difficulty types

1.4 Self-assessment: what do people already ask you?

You are not looking for a topic you enjoy. You are looking for a question you keep answering. This exercise takes 20 minutes and it decides everything that follows.

Five questions people asked me in the last month

Question I have answered more than three times

Question I answered in five sentences or more

Who asked it (be specific: "Grade 12 students", not "people")

What they were trying to achieve when they asked

What it costs them to get it wrong

EXPLAIN The "I have answered this question five times" test works because repetition is evidence. If five different people independently brought you the same problem, there are hundreds more who never found you and are currently searching, asking in a group, or paying someone else to solve it.

SHOW **Example scenario — fictional.** Selam is an accountant in a regional city. In one month, four different small shop owners asked her the same thing: how to work out how much they actually made last month when sales are recorded in a notebook and expenses are in a plastic bag of receipts. She answers it verbally every time, and every time it takes her 40 minutes. That is the product. Not "accounting for beginners" — a one-page monthly profit worksheet with the exact categories she names out loud when she explains it.

DO Open your phone notes. Write down every question you were asked in the last 30 days that took you more than three sentences to answer. Aim for ten. Do not filter yet — an unglamorous question is a better business than an interesting one.

CHECK You are done when you have one question that (a) was asked by at least three different people, (b) you can answer without looking anything up, and (c) has a visible cost when the person gets it wrong — lost money, lost time, a failed exam, a rejected application.

Translation: choose the question people keep asking you. Do not choose the topic you personally like.

02

SECTION TWO

Finding a Problem Worth Paying For

Where to listen for real problems where you live, how to tell a real problem from a passing complaint, how to write a problem statement you can build against, and a worksheet to do it today.

01 Six places to listen

02 The five-times test and the cost test

03 Writing a problem statement

04 Worksheet and a worked fictional example

There is no shortage of problems where you live. There is a shortage of people who write them down.

This section is about collecting raw material — the exact words people use when they describe something that is costing them money, time or opportunity. You are not looking for an idea. You are looking for a sentence someone said.

2.1 Six places to listen

1. **Telegram groups**

   The most active written public conversation where you live. Join groups in your field — teacher groups, exam preparation groups, freelancer groups, professional association groups, buy-and-sell groups for a city. Do not post anything for the first two weeks. Read. Every time someone asks a question that gets five replies, write it down. Questions with many replies are questions with no good free answer.

2. **Facebook groups**

   Facebook remains the largest social platform where you live by reach. Groups for job seekers, university students by department, small business owners by city, and buy/sell groups are full of the same repeated questions. Search the group's history for one phrase and read a year of answers.

3. **a local classifieds site listings**

   a local classifieds site is a live, dollars-priced classifieds marketplace with Addis district filters and Services and Business & Industry categories. Read the Services section not for what is for sale, but for what people are repeatedly paying others to do. Every recurring service listing is a process someone could learn or a template someone could buy.

4. **Google Maps reviews of local businesses**

   This is the most underused source where you live. Open Google Maps, search a business category in your city, and read the one-star and two-star reviews. Complaints are unmet needs with names attached. "They never answer the phone", "no prices anywhere", "waited 40 minutes" — each one is a problem someone would pay to avoid or to fix.

5. **Questions students ask**

   If you teach, tutor or study, you have a live feed of confusion. Keep a note of every question asked in class for two weeks. The question asked by four different students in four different ways is your product. Students also pay in groups — one satisfied buyer brings three classmates.

6. **Questions your colleagues ask**

   At work, the question a newer colleague asks you is the question hundreds of people in your profession are asking with nobody nearby to answer. This is the single best source for a template pack, because workplace questions are usually about a document, a form or a calculation.

> **LISTEN, DO NOT PITCH**
>
> The moment you enter a group and start asking "would anyone buy...", you have stopped listening and started selling. People answer honestly when they do not know they are being surveyed. Read for a week before you say anything, and when you finally post, post a question — never an offer.

2.2 Three tests that separate a real problem from a complaint

Test 1 — The five-times test

Has this exact problem been raised by five different people? One person with a problem is a person with a problem. Five people with the same problem is a market. Count mentions in your notes; do not estimate.

Test 2 — The cost test

What does it cost the person when they get it wrong or do not solve it at all? Money, hours, a failed exam, a rejected job application, a lost client, a fine. If the answer is "nothing much", the person will not pay. If the answer is "they lose $19" or "they fail the exam", you have something.

Test 3 — The search test

Are people already searching for an answer? Check whether the same question appears in group histories, on a local classifieds site service listings, in YouTube comments under local tutorial videos, and in the "people also ask" section of a Google search. Existing search means existing demand. No search and no conversation means you would be educating the market, which is expensive and slow.

SIGNAL	WEAK PROBLEM	STRONG PROBLEM
How often raised	Once, by one person	Five or more times, by different people
Cost of getting it wrong	Mild annoyance	Lost money, lost time, failed exam, lost client
Current solution	Nothing; nobody cares	Paying someone, guessing, copying a neighbour
Language used	Vague: "business is hard"	Specific: "I do not know how much to charge for a wedding photo package"
Who has it	Everyone in general	A named group you can list 20 members of

Use this table as a filter, not a score. A strong problem hits at least four of the five right-hand signals.

2.3 Writing a problem statement

A problem statement is one paragraph that forces you to be specific. Most failed products failed here, in a vague sentence the creator never examined. Use this exact shape.

COPY-READY: PROBLEM STATEMENT FORMULA

[Specific group of people] in [specific place or situation] are trying to [achieve a specific outcome], but they get stuck because [specific obstacle]. Right now they handle it by [current workaround], which costs them [cost in dollars, hours, or opportunity]. They would pay for [specific deliverable] because it would get them to the outcome in [much shorter time / with much less risk].

WORKED EXAMPLE — EXAMPLE SCENARIO — FICTIONAL

Filled-in problem statement: Third-year accounting students at a private college in a regional city are trying to pass their cost-accounting midterm, but they get stuck because the lecturer's notes are 60 pages of theory with no worked problems and the past papers have no answers. Right now they handle it by photocopying a friend's handwritten solutions, which costs them $0.25 per copy and is often wrong. They would pay for a 15-page worked-solutions booklet for the last four years of past papers because it would let them practise the exact question types instead of rereading theory.

Why this passes the tests: The group is nameable (third-year accounting students at a specific college). The obstacle is specific (theory-only notes, no answers). The current workaround has a price attached ($0.25 per photocopy). The cost of failure is visible (a failed midterm). The deliverable is small enough to build in two weeks.

What would make it fail: If the creator had written "students struggle with accounting", there would be no product — no group, no obstacle, no outcome, no price point. Vague statements cannot be built against.

2.4 Worksheet — your problem statement

The group (be embarrassingly specific) .....

Where they are, or what situation they are in .....

The outcome they want .....

The exact obstacle .....

What they do now instead .....

What that costs them .....

Evidence: who raised it, and when .....

Number of separate mentions in my notes .....

Write your finished problem statement in the box above, in one paragraph, using the formula. Keep it. Section 03 tests it, section 04 builds against it, and section 05 turns it into a sales page.

EXPLAIN

Your problem statement is the contract between you and your buyer. Every later decision — product type, length, price, sales page headline, refund policy — is a consequence of this paragraph. If the paragraph is vague, every later decision will also be vague, and the buyer will not recognise themselves in your sales page.

SHOW

Example scenario — fictional. Dawit is a chef in a smaller town who keeps getting asked by friends who run small food stalls how to cost a plate of food so they know their profit. They currently guess, and two of them have been selling at a loss for months without noticing. His deliverable is not a cookbook. It is a one-tab Google Sheet where you list ingredients, quantities and current market prices, and it returns cost per plate, suggested selling price and margin. That is a template pack for food-stall owners in one town — specific, small, and buildable in a week.

DO

Fill the worksheet above. Then write the problem statement out again in the plainest language you have, as if telling a friend. If the plain version is shorter and clearer, use that one instead.

CHECK

Someone else should be able to read your statement and immediately name five people who fit the description. If they ask "which students?" or "which shop owners?", the statement is not finished.

03

SECTION THREE

Validating Demand Before You Build

Five cheap validation methods, the exact messages to send, the pre-order test, and the rule that decides whether you build or change the idea.

01 Why validation is not optional

02 Five validation methods, cheapest first

03 The exact words to use

04 The three-yes rule

05 Reading your validation results

Validation is one sentence long: get three strangers in your target group to say they would pay for this specific thing. Not "that is a nice idea". Not "send it to me when it is done". That they would pay, and how much.

It takes two days and it costs nothing. Skipping it costs a month and your belief that locals buy digital products.

3.1 Why validation is not optional

When you build without validating, you are making four guesses at once: that the problem is real, that your group has it, that your solution matches how they think about it, and that they will pay your price. If any one of the four is wrong, you find out only after publishing — when you have no energy left to fix it.

Validation tests the first three cheaply. It cannot test the fourth perfectly, because people are politer than their wallets. That is why method five below — the pre-order — exists.

> **THE RULE THAT DECIDES EVERYTHING**
>
> **If you cannot get three people to say "yes, I would pay for that", change the idea, not the price.**
>
> Lowering the price is the most common wrong reaction to weak validation, and it is wrong for two reasons. First, if nobody wants the thing at $2 they usually do not want it at $0.60 either — a low price does not create desire. Second, the people who said yes at $2 might have paid $3; by dropping the price you have thrown away money for nothing.
>
> Change the problem. Change the group. Change the deliverable. Keep the price roughly where the market anchors say it belongs.

3.2 Method 1 — Ask ten people one specific question

The cheapest method, and the one you should run first. Choose ten people who fit your problem statement exactly. Message them individually — not in a group, not as a broadcast. Ask one question. Do not pitch.

COPY-READY: VALIDATION MESSAGE (ONE-TO-ONE, WHATSAPP OR TELEGRAM)

Selam `[name]`. I am not selling you anything, I am asking a question. You `[do the thing / are in the situation]` — when `[the problem happens]`, how do you handle it at the moment? I am trying to understand whether this is a real problem for people or just for me.

Then wait. Do not follow up with a pitch in the same conversation.

COPY-READY: FOLLOW-UP QUESTION, AFTER THEY ANSWER

That helps, thank you. If someone gave you `[specific deliverable — a one-page sheet / a 15-page guide / a template]` that `[specific outcome]`, would that be useful to you, or would you still do it the way you do now?

Note the wording. "Would that be useful" gets polite lies. The second half — "or would you still do it the way you do now" — gives them permission to say no, and that is what makes the answer worth something.

How to record the answers

PERSON	CURRENT WORKAROUND	COST OF THE WORKAROUND	REACTION	WOULD THEY PAY?
1	Guesses the price	Sells at a loss sometimes	Interested	Yes — asked how much

PERSON	CURRENT WORKAROUND	COST OF THE WORKAROUND	REACTION	WOULD THEY PAY?
2	Asks a friend	Waits two days	Neutral	Maybe, if cheap

PERSON	CURRENT WORKAROUND	COST OF THE WORKAROUND	REACTION	WOULD THEY PAY?
3	Nothing	Does not see the problem	Confused	No

One "yes — asked how much" is worth more than five "that sounds nice". A person who asks the price has already imagined buying.

3.3 Method 2 — Post the table of contents and watch for one signal

Write the table of contents of the product you have not built yet. Post it where your group already is — a Telegram group, a Facebook group, your own status. Do not say "coming soon" and do not say "DM me for price". Post the contents and one line saying you are thinking of making this.

Then watch for two signals and ignore everything else:

— **Someone asks the price.** That is a buying signal. Count these.

— **Someone asks when it will be ready.** That is a weaker but real signal. Count these separately.

— "Nice", "good job", "send it to me" — ignore all of it. None of it is a signal and treating it as one is how people build products nobody buys.

COPY-READY: TABLE OF CONTENTS POST

I am putting together something for `[specific group]` about `[specific problem]`. Draft contents:

1. `[item]`
2. `[item]`
3. `[item]`
4. `[item]`
5. `[item]`

Is anything missing that you would want in it?

The last line is the important one. It invites people to tell you what to build, and their answers become your product outline for free.

3.4 Method 3 — Build it for three people at a discount

Instead of building for a hypothetical market, find three people with the problem and offer to build the thing for them at a heavy discount in exchange for feedback and permission to use their comments as feedback. This is the highest-information method available.

COPY-READY: THREE-PERSON PILOT OFFER

> Selam [name]. I am building [deliverable] for [group]. I want to make it for three people first, properly, and adjust it based on what they tell me. If you are one of the three, I will send it to you for [discounted price — for example $0.60 instead of $2] and I will ask you two questions after you use it. If it does not help you, I will send the money back, no discussion.

What you get: real money changing hands before the product is finished, a reason to finish, three honest reviewers, and three buyers who will tell others. **What it costs you:** a discount and the discipline to actually ask the two questions.

3.5 Method 4 — Check whether it is already free, and how

Before you build, spend 45 minutes finding out who already solves this for free. Search the phrase in Google, look in the group histories, look for a free YouTube tutorial, look for a free government or NGO resource.

Then answer one question: **why would someone pay me when this is free?** Valid answers include: it is in English and they need the local language or Afaan Oromoo; the free version is a 40-minute video and mine is a one-page sheet; the free version is theory and mine is a filled-in example; the free version is American and mine uses local prices, local tax categories, local examples; the free version exists but nobody can find it.

THE COMPETITION YOU SHOULD WORRY ABOUT

The "5 Million local Coders" programme recorded **5,005,146 enrolments by June 2026** — free, structured, Udacity-backed, and the government raised the target to 7 million. That is the standard your paid product is measured against for general digital skills content. You cannot beat free general content with paid general content. You can beat it with **a shortcut, a template, or accountability** — the three things a free course cannot give.

3.6 Method 5 — Run a pre-order to five people

The strongest test available to you, and the only one that involves money before the product exists. Tell five people who showed interest that you are finishing it, that you are taking five pre-orders at a reduced price, and that they will receive the file on a specific date. Take the money.

IF YOU TAKE PRE-ORDER MONEY, YOU OWE A DELIVERY

Only run a pre-order if you will genuinely deliver on the date you promise. If you miss the date, message every buyer before the date passes, explain, and either give a new date or return the money. A pre-order that turns into a delay with no message is how a small creator loses a whole buyer group permanently.

Keep the pre-order price clearly lower than the final price, and keep your promise to give pre-order buyers the final price forever.

METHOD	TIME	COST	WHAT IT PROVES	WEAKNESS
1. Ask ten people	2–3 hours	Free	The problem is real and shared	People are polite
2. Post the contents	1 hour + 3 days waiting	Free	Whether the contents attract attention	Attention is not money

METHOD	TIME	COST	WHAT IT PROVES	WEAKNESS
3. Three-person pilot	1–2 weeks	Your discount	Real money, real feedback	Slow

METHOD	TIME	COST	WHAT IT PROVES	WEAKNESS
4. Free-competition check	45 minutes	Free	Whether you have a reason to exist	Does not prove demand
5. Pre-order to five	2–5 days	Refund risk if you fail	That money actually moves	Requires a finished product soon

Run methods 1, 2 and 4 for every idea. Run 3 or 5 for the one idea you actually intend to build.

3.7 Reading your validation results

Build it

- Three or more people said yes and at least one asked the price.
- At least two people described the same obstacle in their own words.
- Someone is already paying something — money, time, or a favour — to work around it.
- You can name 20 people who fit the group without thinking hard.

Change the idea

- Everyone said "interesting" and nobody asked what it costs.
- The ten people described ten different problems.
- Nobody currently does anything about the problem.
- The only reason you can give for building it is that you find it interesting.
- You cannot name ten people who fit the group.

Change the idea, not the price. Adjust one of three things: the group (narrower and easier to find), the problem (sharper and more expensive to get wrong), or the deliverable (smaller and more immediately usable). Then validate again — it takes a day.

EXPLAIN Validation converts a guess into a decision. Without it, publishing is a gamble you take after spending your best energy. With it, publishing is a delivery — you already know three people are waiting.

SHOW **Example scenario — fictional.** Hana is a nurse in a regional city preparing a guide on home care for elderly relatives. She messages ten people from her own contact list whose parents need daily care. Seven reply. Four describe the same obstacle: nobody in the family knows which tasks are safe to do at home and which need a clinic. Two ask how much a written guide would cost. Two others say they would pay for a printed version they could leave at their mother's house. She now knows: build the guide, keep it short, and offer a printable version. She has not yet written a word and she already knows the shape of the product and two of its features.

DO Send the validation message in 3.2 to ten people today, before you read the next section. Do not send it to a group. Do not send it to 50 people. Ten individual messages, one question each.

CHECK You are done when you have written answers from at least five people, and at least two of them used similar words to describe the obstacle. Write those exact words down — they go into your sales page headline in section 05.

04

SECTION FOUR

Building the Product

Scope control, the minimum viable version of each product type, how to draft fast with a free AI tool and still publish something trustworthy, the standard structure, and how to export a PDF that behaves properly.

01 Scope control: why most products never get finished

02 Minimum viable versions

03 Drafting fast with AI, and the verification rule

04 The six-part structure

05 Exporting a PDF that works on local phones

A digital product that takes 200 hours does not get finished. A digital product that takes 20 hours gets finished, gets sold, gets feedback, and gets a version two.

This section is deliberately about making the product *smaller*. Everything here is built around one constraint: it has to be done in about two weeks, by one person, possibly on a phone.

4.1 Scope control: the reason most products never ship

The single most common cause of a digital product that never gets published is not a lack of skill. It is a scope that grows every week. You start with a 20-page guide about pricing your services. By week three it is a 70-page book about running a small business, with a chapter on tax you are not qualified to write, and a section on marketing you have not tested. You stop. Nobody ever sees it.

THREE SCOPE RULES

— **One problem, one outcome.** The product takes the buyer from one starting point to one result. If your outline has two outcomes, you have two products. Build the first one.

— **Hard page or item cap.** Decide the ceiling before you start — 20 pages, 12 templates, 30 prompts — and treat it as a physical limit. When you hit the cap, you cut, not extend.

— **Ship by day 14 whatever state it is in.** An imperfect finished product with three buyers teaches you more than a perfect unpublished one. Version two exists precisely for the things you cut.

Write your cap down now, in the worksheet at 4.6. A cap you have written down is a decision. A cap you are "aiming for" is a wish.

4.2 Minimum viable versions, by type

TYPE	MINIMUM VIABLE VERSION	CAP	BUILD DAYS
Ebook / guide	Cover, quick start, the core method in 3 steps, 2 worked examples, a closing checklist	20 pages	7–14
Checklist	One page of ordered steps, one page of common mistakes, printable	2 pages	1–3
Template pack	12 files that each do one job, plus a one-page "how to use these" guide	12 files	4–10
Study material	Condensed notes for one unit, plus 40 practice questions with an answer key	25 pages	7–20
Business resource	One working calculator sheet plus three document templates	4 files	5–12
Design resource	10 editable templates in one style, plus a preview sheet	10 files	4–10
Prompt collection	30 prompts for one job, each with the output you got when you tested it	30 prompts	2–5

TYPE	MINIMUM VIABLE VERSION	CAP	BUILD DAYS
Educational material	Lesson plans for one term of one subject, with worksheets	One term	10–21

TYPE	MINIMUM VIABLE VERSION	CAP	BUILD DAYS
Audio / video mini-course	45 minutes of recorded content in 6 short parts, plus a written summary of each	6 parts	21–56

The caps are teaching recommendations for a first product, not rules. Nothing stops you from exceeding them in version two.

4.3 Drafting fast with a free AI tool — and the rule that makes it safe

Where a free AI chat tool is available to you, it removes the two slowest parts of producing a digital product: the blank page and the first rewrite. The rule that makes this safe is short and absolute.

THE VERIFICATION RULE

Anything you publish must be verified by you. Not "reviewed". Verified. That means every number, every formula, every legal or medical or tax statement, every exam answer and every local-specific claim must be checked against a source you trust before a single buyer sees it.

An AI tool will produce text that sounds confident and is sometimes wrong. If you publish an unverified wrong answer key, or an unverified claim about a tax rate, the buyer's loss is real and your reputation in that group is finished. It is also, in the exam-material and health-material categories, genuinely harmful.

What AI drafting is genuinely good for

— Turning your messy notes into an ordered outline.

— Expanding three bullet points you wrote into a first-draft paragraph you then rewrite in your own words.

— Suggesting the 12 spreadsheet columns a shop owner would actually need.

— Producing 40 practice questions on a topic you then check one by one.

— Rewriting your own paragraph in simpler English.

— Giving you five possible product names to react to.

What it must never do for you

— Supply numbers, prices, tax rates, legal requirements or medical instructions that you publish unchecked.

— Write the parts of the product that only you know — the local examples, the real numbers from your market, the thing that actually happens on the ground in your city.

— Reproduce copyrighted text or images. See section 08.

YOUR UNFAIR ADVANTAGE IS NOT THE WRITING

Anyone can get a fluent 2,000-word document out of an AI tool in ten minutes, which means fluent text is now worth close to nothing. What cannot be generated is the part that comes from you: **the actual price a food stall in a smaller town pays for onions, the exact question the lecturer sets every year, the specific paperwork a local district office asks for.** Use the AI tool to produce the scaffolding. Put your own verified local detail inside it, and say so in the product — buyers pay for the detail, and they can tell the difference.

4.4 The six-part structure

Use this structure for any written product, from a 2-page checklist to a 40-page guide. It is the order buyers expect, and it survives being read on a phone.

1. **Cover**
   Title, subtitle, your name or business name, and one line saying who it is for. No stock imagery needed. A clean, readable title page beats a busy one, and it will be the thumbnail people see when you share it.

2. **Quick start**
   One page. The fastest possible path to a result. "If you only do one thing, do this." This page is what makes a buyer feel the product was worth the money in the first five minutes, and it is the page most likely to be screenshotted and shared — which is free marketing.

3. **The core method**
   The main sequence, in three to five numbered steps. This is the product. Everything else in the file exists to support it. If your core method needs more than five steps, you have two products.

4. **Worked examples**
   Two examples with real numbers and real place names. local specifics here are what separate your file from a free English-language article. Show the working, not just the answer.

5. **Templates or worksheets**
   The part the buyer can use without thinking: a table to fill in, a checklist to tick, a sheet to copy. This is what makes them keep the file instead of deleting it.

6. **Closing checklist**
   Ten to fifteen tick items that summarise the product. Buyers who tick things feel they got value, and a completed checklist is a shareable summary of your work.

4.5 Exporting a PDF that actually works

A PDF exported badly is the most common technical complaint from a country with limited payment accessn buyers, and it is entirely avoidable. Check these five things before you sell.

CHECK	HOW TO TEST IT	WHY IT MATTERS
Text is selectable	Open the PDF and try to select a sentence with your finger or cursor	If it is an image, the buyer cannot search, copy or translate it, and it looks cheap
Page numbers are present	Scroll to page 4 and look at the bottom	Buyers refer to pages when they ask you questions

CHECK	HOW TO TEST IT	WHY IT MATTERS
Table of contents works	Tap an entry and see if it jumps	Not essential, but it is the difference between a file and a product

CHECK	HOW TO TEST IT	WHY IT MATTERS
File size is small	Check the file size before uploading	Target under 5 MB for text; under 15 MB with images. A 40 MB file is a real problem on a 2 GB monthly bundle
It opens on a phone	Send it to a friend with a different phone and ask them to open it	The majority of your buyers will read it on a phone, not a laptop

NEVER DELIVER A SCREENSHOT OR A PHOTO AS THE PRODUCT

Some sellers export their document as a series of images, or photograph printed pages and send those. It looks unprofessional, it cannot be searched, and it makes the buyer feel they were sent a copy rather than a product. Google Docs and Google Slides both export real PDFs with selectable text in two taps, on a phone. There is no reason to do anything else.

Compressing images before they go in

Phone screenshots are the usual cause of a bloated file. Before inserting any image, crop it to just the relevant part and reduce its dimensions. A screenshot cropped to the useful area is often one-tenth the size of the original. If your PDF is over 20 MB after export, go back and crop.

4.6 Worksheet — your build plan

My product type .....

My hard cap (pages, files or items) .....

My core method in three to five steps .....

My two worked examples .....

My template or worksheet .....

Ship date (14 days from today) .....

EXPLAIN Scope control is not about lowering your ambition. It is about converting ambition into something that exists. Every published product you can point to teaches you something; every unpublished masterpiece teaches you nothing and costs you the confidence to try again.

SHOW

Example scenario — fictional. Yonas teaches Grade 10 chemistry in a regional city. His first plan was a full chemistry revision book — 120 pages, six units. He capped it at 20 pages and built "The 18 Marking-Scheme Traps in Grade 10 Chemistry": one page per trap, each with the exam question, the wrong answer students give, the correct answer, and one sentence on how to remember it. Twenty pages, eleven days, $1.50. The trap list came from his own marking experience, which no free resource has. Version two, if it sells, adds the next unit — and by then he will know whether students pay for this shape of product at all.

DO

Open your document now and create the six headings: Cover, Quick Start, The Core Method, Worked Examples, Templates, Closing Checklist. Fill in the Quick Start and the Core Method today. Leave the rest empty — an empty heading you must fill is easier to finish than a blank page.

CHECK

You are done with the first draft when the Core Method fits in five steps or fewer, the file is under your cap, and you can read the Quick Start and immediately see a result the buyer can get on day one. If the Quick Start is vague, the whole product is vague.

05

SECTION FIVE

Naming, Pricing and the Sales Page

Naming formulas that work where you live, three pricing bands built on real market anchors, why you start low and raise the price after ten buyers, and a complete copy-ready sales page.

01 Naming formulas

02 How local buyers read a title

03 Pricing: three bands and the market anchors behind them

04 Why you start low and raise after ten sales

05 The sales page, section by section

06 A complete copy-ready sales page for a fictional product

A good product with a bad name and a confusing price does not sell. This section fixes the three things a buyer sees before they decide: the title, the number, and the page.

None of this is about persuasion tricks. It is about removing the reasons a serious buyer says no: they cannot tell what it is, they cannot tell who it is for, they do not know what it costs, and they do not know how to pay you.

5.1 Naming formulas that work where you live

Your title has one job: let a buyer recognise themselves and the outcome in under three seconds, while scrolling on a phone. Use one of these five shapes.

FORMULA	EXAMPLE TITLE	WORKS WHEN
Number + Specific Thing	12 Ready-Made Invoice Templates for Small Shops	You have a countable deliverable. The most reliable formula for templates.
Outcome + Timeframe	Cost Your Menu in 20 Minutes a Week	The buyer's pain is time, and the outcome is measurable.
For [Group] — [Specific Problem]	For Grade 12 Students: The 18 Marking-Scheme Traps in Chemistry	Your group is nameable and searches by group. Strong in education.
The [Local Detail] Method	The the commercial district Shop Method: Pricing Your Products Without Guessing	You have a genuinely local method or workflow worth naming.
From X to Y	From Notebook to Profit: A Monthly Money Sheet for Small Shops	The buyer is stuck at a clear starting point and wants a clear end point.

All titles above are invented teaching examples. They are not real products, and none refers to a real business.

What to avoid in a name

— **"Ultimate", "Complete", "Master"** — they promise everything, which buyers read as promising nothing.

— **Clever wordplay.** It does not survive being read once, quickly, on a phone.

— **Long English titles with no group named.** "A Comprehensive Guide to Financial Management" tells a smaller town shop owner nothing about whether it is for them.

— **Borrowed brand names.** Never use another company's name to sell your product. That is a trademark problem, and section 08 explains the risk.

— **Numbers you cannot defend.** If the title says "50 templates", there must be 50.

5.2 How local buyers read a title

They read the number, then the group, then the outcome — usually in that order, and usually while scrolling. Put the number or the outcome first. Put the group second. If your title does not contain either a number or a named group, most buyers will not stop.

Translation: tell them in one line what it is, who it is for, and what they get.

5.3 Pricing: three bands, and the anchors behind them

Price from the market, not from your feelings. Here are the published local anchors this course is working from.

ANCHOR	PRICE	WHAT IT TELLS YOU
Locally published the local language e-book	~$1.25	The default expectation for a digital text product where you live
Ordinary paperback novel	$3	What a physical book costs; a digital file competes against this
Kuraztech individual course	$1–499	A branded course marketplace's own range — and its filter tops out at "250+"
GlobeDock Academy, full year of tutoring	$16	The ceiling for a service bundle with human accountability
Private in-person digital-skills course	~$125	What a family pays when there is no cheaper option — your context, not your price

Sources in Sources & Further Reading. All figures published as of September 2026.

Small guide

$0.60–300

BAND ONE

A checklist, a prompt collection, a 15–25 page guide, a single template. Impulse purchase range. The buyer does not need to think about it or discuss it with anyone.

Substantial resource

$2–600

BAND TWO

A template pack of 10–15 files, a 40–60 page guide, a full study pack with answer key, a business resource set. The buyer thinks for a day and then buys.

Bundle

$5–1,500

BAND THREE

Two or more products together, or a product plus a live element — a Q&A call, a review of the buyer's work, a closed support group. Justified only when there is a human commitment attached.

Bands are teaching recommendations for the local consumer market. Test your own price with your own buyers.

TWO PRICING RULES THAT MATTER MORE THAN THE EXACT NUMBER

1. Start lower, then raise the price after the first ten buyers. The first ten buyers are buying an unproven product from an unknown seller. They deserve the lower price, and you need their feedback and their comments more than you need the extra margin. After ten sales you will have: proof the product works, real buyer comments, and answers to the questions buyers asked. At that point the product is worth more, and you raise the price — and you tell new buyers why.

2. Free is a marketing decision you can afford exactly once. Giving away a small free checklist to build a buyer list is a legitimate move. Giving your main product away for free is not marketing, it is just giving it away — and it trains the people around you to expect your work at no cost. If you want a free sample, make a separate small thing: the first three pages, one template out of twelve, the checklist out of the guide. Keep the main product priced.

WHY STARTING LOW AND RAISING LATER WORKS — ARITHMETIC EXAMPLE

```
10 buyers × $1.50 = $16
```

```
30 buyers × $2.50 = $75
```

These are arithmetic illustrations, not forecasts. The point is that the first ten sales are bought for learning, not for income. If you price at $1.50 forever, you have paid for the learning and never collected the return.

When someone says it is too expensive

Do not immediately discount. Ask one question: "Compared to what?" If they compare it to a free YouTube video, that is a value-conversation, and the answer is the shortcut: your file saves them four hours. If they compare it to a photocopy, the answer is that a photocopy has no answer key and no updates. If they genuinely cannot afford it — a student in a group of ten — offer a lower-priced smaller version, or a group price for a class, rather than discounting the main product to everyone.

5.4 The sales page, section by section

Your sales page does not need to be a website. A Telegram post, a Facebook post, a Google Doc, or a local classifieds site listing all work. What matters is that it answers, in order, the eleven questions below. Every one of them is a reason a serious buyer would otherwise say no.

#	ELEMENT	THE QUESTION IT ANSWERS
1	One-line promise	What will this do for me?
2	Who it is for	Is this for someone like me?
3	The problem	Do they understand my situation?
4	What is inside	What exactly do I get?
5	What it is not	Am I going to be disappointed?
6	A sample	Is the quality any good?
7	The price	How much, and is it worth it?
8	How to pay	Can I actually pay from where I am?
9	How you receive it	What happens after I pay?
10	Guarantee and refund	What if it is not what I expected?
11	FAQs	The last three objections

THE TWO ELEMENTS PEOPLE SKIP, AND SHOULD NOT

"What it is not" builds more trust than anything else on the page. Saying plainly "this is not a tax guide and it does not tell you which forms to file" makes every other sentence more believable. **"How you receive it"** is the element that stops a buyer stalling at the last moment — most people who do not buy after reading the price simply do not know what happens next.

5.5 A complete copy-ready sales page

The page below is a full worked example. The product is fictional.

COPY-READY SALES PAGE — EXAMPLE SCENARIO — FICTIONAL

The Monthly Money Sheet for Small Shops

A one-tab Google Sheet that turns your notebook and your bag of receipts into a clear monthly profit number — in about 20 minutes a month.

Who this is for

Small shop, kiosk and food-stall owners who record sales in a notebook, keep receipts loose, and are not certain at the end of the month whether they made money or lost it. If you already use accounting software, you do not need this.

The problem

When sales go in a notebook and expenses go in a bag, the month ends with a feeling instead of a number. You cannot tell whether a product is profitable, whether prices need to change, or whether a slow month is actually a loss. Guessing wrong is expensive, and you only find out weeks later.

What is inside

— The Monthly Money Sheet: a single tab with 12 revenue categories and 14 expense categories already set up.
— An automatic profit and margin calculation for each product line.
— A one-page "how to use this" guide with a filled-in example using sample numbers.
— A simple monthly comparison tab so you can see this month against last month.
— A short written guide on which numbers to check every week and which to check once a month.

What it is not

This is not an accounting system, not tax advice, and not a replacement for an accountant. It does not produce tax filings, it does not connect to a bank, and it does not include payroll. All figures inside the example are sample numbers, not real business data.

A sample

The preview sheet shows the first tab with sample numbers filled in, so you can see exactly what you will be using before you pay. Ask for the preview and I will send it.

Price

`[$2]`. This is the introductory price for the first ten buyers. After that the price goes to `[$3]`. Early buyers keep the lower price on future updates.

How to pay

Send `[$2]` by a mobile wallet / a mobile-money wallet / a bank wallet to `[your number]`, or by bank transfer to `[bank name, account name, account number]`. Then send me the confirmation screenshot or the transaction reference number here on Telegram.

How you receive it

Within a few hours of confirming your payment — and always within 24 hours — I send you a Google Drive link with view and copy access to the sheet, plus the guide as a PDF. You will get a copy into your own Drive so it is yours to keep and edit.

Refund

If the sheet does not work for your type of shop, tell me within 14 days and I will refund you in full, no questions. You keep the files.

Questions people ask

— *Will it work on my phone?* Yes. Google Sheets works in the mobile app and in a browser, and the guide explains how to enter numbers with one hand.
— *Do I need internet all the time?* No. You can fill it in offline and it syncs when you are back online.
— *Can I use it for more than one shop?* Yes, copy the tab as many times as you need.
— *Do I need to know Excel?* No. You only type into the yellow cells. Everything else is calculated.

All names, prices and details in this example are fictional and are for teaching only.

NEVER WRITE THESE ON A SALES PAGE

— Any claim about how much the buyer will earn. You do not know.

— Fake scarcity: "only 3 left" on a file that can be copied infinitely, or a countdown that resets.

— Invented testimonials, invented buyer counts, invented screenshots.

— "Guaranteed results", "risk-free income", "passive income forever".

— A price you do not intend to charge, used only to make the real price look small.

Beyond being dishonest, all of these are easy to check and destroy trust in a market where buyers talk to each other in Telegram groups.

EXPLAIN A sales page is not persuasion. It is removal of doubt. Every section answers one question the buyer already has. When the last question is answered, the buyer either pays or decides this is not for them — and both outcomes are fine, because the second one saves you a refund and a complaint.

SHOW Notice the fictional page above never says "this will increase your profit". It says what the sheet does, what it costs, how to pay, how you receive it, and what it is not. That is what an local buyer on a phone at 9 p.m. needs in order to decide in three minutes.

DO Write your own page with the eleven elements from 5.4. Use plain text in a note on your phone first. Do not build a website. When it is finished, read it out loud — anything you stumble over, a buyer will skip.

CHECK Hand your page to someone who is not in your target group. Ask them three questions: what is this, who is it for, and what happens after I pay? If they cannot answer all three, the page is missing an element.

06

SECTION SIX

Getting Paid where you live — The Honest, Verified Chapter

What actually works for an unlicensed individual, what requires a registered business, what is verified for international buyers, what is unverified, and what you must never do.

01 The four questions that settle it in twenty minutes

02 Local clients versus international clients

03 The legitimate routes, in order

04 What never to do

05 Tax and registration, honestly

This is the section most courses get wrong, because most courses are written for people with PayPal, Stripe and a business licence. You probably have none of those. This section tells you exactly what you can do today, what requires paperwork first, and which things are simply not verified — so you do not build a business on a guess.

Read it slowly. The rules here change, and where this course could not confirm something, it says so and tells you to check it yourself.

Getting Paid, and Choosing Where to Sell

This is the chapter that decides whether the rest of the book turns into money. It is also the chapter most online advice gets wrong, because most online advice assumes you live in a country with a full set of payment rails. If you do, the short version is at the end of this section. If you do not, the rest of this section is for you.

> **THE ONE RULE THAT PREVENTS ALMOST EVERY PROBLEM**
>
> **Agree the payment route with the client before you agree the price.** Not after the work is done, not in the invoice, not when they ask for your bank details. Before.
>
> A client who cannot pay you the way you need is not a client. They are a conversation. Finding that out on delivery day is the most expensive lesson in this book, and it is entirely avoidable with one question asked early.

How money actually crosses a border

When a client in another country pays you, the money does not travel directly. It moves through a chain, and every link in that chain is a place where it can stop. Knowing the chain tells you which question to ask.

1. **The client pays something**
   A card, a PayPal balance, a bank transfer, a mobile wallet, a local payment method. What they can use depends on *their* country, not yours.
2. **A processor authorises it**
   Stripe, PayPal, Adyen, a regional gateway. This is where most cross-border problems originate, because processors operate country by country.
3. **A platform holds it**
   If you sell through a marketplace or course platform, they hold the money and pay you later, on their schedule, at their minimum.
4. **It is paid out to you**
   A bank deposit in your local currency, a PayPal transfer, or a wallet credit. **This is the link that fails most often**, and it is the one nobody checks before they start.

EXPLAIN Buyer-side and seller-side are independent. What your client can use to pay has nothing to do with what you can receive. A platform can be perfectly good for your buyers and completely useless for paying you.

SHOW *Example — fictional.* A writer in Nairobi sells a $25 template pack. Buyers pay by card without difficulty. The platform's payout page then shows one option: PayPal. The writer's PayPal account can send but cannot receive. Fourteen sales, $350, stuck behind a payout route that was never tested.

DO Before you build anything, open the payout settings of every platform you are considering and write down, in one sentence, exactly how money would reach your bank account.

CHECK Can you name the rail, the currency, the minimum payout and the delay? If any of those four is a guess, you have not finished checking.

The four questions that settle it in twenty minutes

Do this once per platform. It takes about twenty minutes and it prevents weeks of wasted work.

QUESTION	WHERE TO LOOK	WHAT A USABLE ANSWER LOOKS LIKE
1. Does this platform pay out to my country?	The platform's own payout-settings page or help article — never a blog post, never a YouTube video	Your country named on the platform's own list, with the payout currency
2. Through which rail?	The same page	A named method: local bank deposit, PayPal, Payoneer, wallet. "Contact support" is not an answer
3. What is the minimum and the delay?	The payout help article	A number and a schedule, so you can plan cash flow
4. What does it cost in total?	The pricing page *and* the fees help article — they often disagree	Platform fee plus processing fee, added together, expressed as a percentage of a typical sale

TWO RULES THAT WILL SAVE YOU MONEY

Read the payout page, not the signup page. Almost every platform lets you sign up from almost anywhere. That tells you nothing. The gate is payout.

Check whether two platforms share a rail. If two services both pay through the same underlying processor, they are not backups of each other. When that one rail has a problem, both stop at once. Verify the underlying rail, not just the brand on the front.

Local clients versus international clients

These are two different problems and they need two different answers. Do not let one delay the other.

	LOCAL CLIENTS	INTERNATIONAL CLIENTS
What works	Bank transfer, mobile wallet, cash, a local card gateway. Almost always available to an individual with no registered business.	A licensed remittance corridor, a platform that pays out to your country, or an employer's own payroll route.
Speed	Same day, often same hour	Days to weeks, depending on the platform's payout schedule

	LOCAL CLIENTS	INTERNATIONAL CLIENTS
What can block it	Nothing much, if you have an account in your own name	Country eligibility, missing documents, a rail that does not reach you

	LOCAL CLIENTS	INTERNATIONAL CLIENTS
Best first move	Start here. Local clients pay for your proof.	Test the payout route with a small real payment before you promise anything

THE TEST PAYMENT

Before you quote a single international client, run one small real transaction end to end: sell something cheap — a $5 template, a $10 review, a single small job — and take it all the way to money in your account.

This costs you one afternoon and one small fee. It converts every assumption in this chapter into a fact, and it is the single most useful hour in this entire book.

What to say to a client about payment

Clients are not suspicious of payment questions. They are suspicious of vague ones. Say the route plainly, in the first conversation, in writing.

COPY-READY: THE PAYMENT-ROUTING MESSAGE

Before we start, one practical thing so neither of us has a surprise at the end.

I am paid by **[route: bank transfer / a named platform / a licensed transfer service]**. The money arrives in **[currency]**, and I can start work as soon as the first payment shows on my side.

If you would rather use a different method, tell me now and I will check whether it works — I would rather spend five minutes on this today than a week on it later.

For **[amount]** the split is **[50]** % to start and **[50]** % on delivery.

COPY-READY: WHEN A PAYMENT IS LATE

Hello **[name]** — checking in on the **[amount]** for **[work]**, which I sent on **[date]**. It has not shown on my side yet.

Could you confirm the date it was sent and the reference number? If it has not gone out yet, no problem — just let me know when it will, and I will plan around that.

Pricing when the route costs money

Cross-border routes cost the sender or the receiver money. Decide who absorbs it before you quote, and put it in the price rather than discovering it later.

WORKED EXAMPLE — TARGET ARITHMETIC, NOT A FORECAST

```
Your price for the work: $100
```

```
Transfer or platform cost, if you absorb it: $5–$15
```

```
What actually reaches you: $85–$95
```

Two ways to handle it: quote a price that already includes the cost, or state plainly that transfer fees are the sender's. What you must not do is quote $100 and then argue about $12 after delivery.

NEVER DO THESE THINGS, WHATEVER ANYONE TELLS YOU

— **Never enter a false country, name or address** on a payment platform. It breaches the provider's terms, it usually fails identity verification anyway, and the consequence is a frozen balance and a closed account — with your customers refunded and your earnings gone.

— **Never use a relative's or friend's account abroad** to receive money that is yours. It is the same misrepresentation with extra steps, and it puts their account at risk too.

— **Never use a VPN to open a financial account** in a country you do not live in.

— **Never buy or rent a verified account.** The seller keeps access to it.

— **Never accept payment in a form your country restricts.** Several countries prohibit or restrict virtual-asset transactions; check your own before you accept anything unusual.

The published terms are unambiguous about this. Most platforms require you not to "create an account using a false identity or information, or on behalf of someone other than yourself", and prohibit misrepresenting your "identity, location or credentials". The stated remedy is suspension or termination, and where an underlying processor makes the final call it is often not appealable.

The legitimate routes, in the order worth trying

#	ROUTE	WHO IT SUITS	WHAT TO VERIFY FIRST
1	A platform that publishes your country on its own payout list, paying into a local bank account in local currency	Anyone selling digital products or courses	That the payout page offers *bank deposit*, not "PayPal only", for your country
2	A licensed money-transfer service (Western Union, MoneyGram, Remitly, WorldRemit and similar) for a one-off client payment	Freelancers and service sellers with a single client	That the receiving country and currency appear on the provider's own corridor list
3	An employer's own payroll or contractor route	Remote employees and long-term contractors	That the employer has paid a contractor in your country before — ask them directly
4	Registering as an exporter of services and receiving into a foreign-currency account	Anyone earning regularly from abroad	Your own country's rules. In several countries this unlocks full retention of foreign-currency earnings and an international card — ask a local accountant, do not guess

#	ROUTE	WHO IT SUITS	WHAT TO VERIFY FIRST
5	Trading through a properly registered company in the country where the payout account sits	Established sellers doing meaningful volume	Real incorporation, a real bank account there, real accounting, and any home-country approval required. Legitimate, but slow and expensive — not a shortcut

IF YOU ALREADY HAVE FULL PAYMENT RAILS

Then most of this chapter is not your constraint, and your fastest route is whatever your clients already use: Stripe, PayPal, a card gateway. Skim the four verification questions above anyway — the platform fee difference between two similar services is often several percentage points, and on a hundred sales a year that is real money.

Tax and registration, stated honestly

THIS IS NOT TAX ADVICE, AND THE RULES ARE LOCAL

Almost every country requires you to declare income you earn, and most require some form of tax registration once you are trading. What that means in practice — a tax number, a business registration, a turnover-tax threshold, a VAT threshold — differs enormously from country to country, and the thresholds change.

What to do: find your national tax authority's own website, look for the page on registering as a sole trader or self-employed person, and read the current threshold. If your earnings are small, you may be below every threshold. If they are not, register. A local accountant charges very little for one hour of advice, and that hour is worth more than any general guidance in a book written for the whole world.

Keep a simple record from your first sale: date, client, amount, currency, what it was for, and the fee deducted. That one sheet makes tax time trivial and makes you look professional if anyone ever asks.

IF YOU SELL THROUGH A MARKETPLACE, READ THIS

Large platforms are often the *merchant of record*, meaning they handle sales tax and VAT for the buyer and remit it themselves. That does not remove your obligation to declare the income you receive. It changes what you have to collect, not whether you have to report.

Some platforms also require a tax form before they will pay you at all — a W-9 if you are in the United States, a W-8 series form if you are not, or a local equivalent. If a form is required and not submitted, payouts are usually paused. Complete it early rather than after your first sale.

Choosing a platform to sell on

The platform matters less than the payout. Two platforms with the same features are not equivalent if only one of them can pay you.

WHAT TO COMPARE	WHY IT MATTERS
Payout country and currency	The only comparison that can disqualify a platform outright

WHAT TO COMPARE	WHY IT MATTERS
Total fee on a real sale	Platform fee plus processing fee, expressed as a percentage of your typical price. A "10% + 50c" headline on a $20 sale is closer to 17% once processing is added — check whether processing is included or additional

WHAT TO COMPARE	WHY IT MATTERS
Whether the platform also sells for you	A built-in marketplace that promotes your product usually charges far more per sale than a direct link does. That can be worth it for discovery and expensive for repeat customers

WHAT TO COMPARE	WHY IT MATTERS
Merchant of record or not	If the platform is the merchant of record it handles buyer-side sales tax and VAT. That is a large administrative saving
Payout minimum and schedule	A $100 minimum and a weekly schedule is fine at scale and painful for your first three sales
Which currencies buyers can pay in	Your buyers may not be able to pay in their own currency, which raises their cost and lowers your conversion

A WORKED COMPARISON YOU CAN COPY

Take the price you actually intend to charge, and calculate three times: what the platform takes, what processing takes, and what is left. Do it for two platforms. Most people are surprised by the gap.

Then check the one thing the fee table never tells you: whether the payout reaches your bank account in your currency, and how long it takes. A platform that keeps 5% and pays reliably beats one that keeps 3% and pays in a currency you cannot receive.

VERIFIED SEPTEMBER 2026 — CHECK CURRENT TERMS BEFORE YOU COMMIT

Platform country lists, payout methods and fees change without much notice, and several large platforms have altered their payout terms in the last two years. Whatever you read here or anywhere else, confirm it on the platform's own payout page before you invest time in a store.

Where a platform's help pages are unclear or contradictory — and some are — the answer is not to guess. It is to complete the payout settings and see what the platform actually offers *your* country, and then to run one small real payment.

07

SECTION SEVEN

Delivery, Customer Support and Refunds

Three delivery methods that work on local connections, how to slow down casual resharing without pretending you can stop it, the delivery message, support reply templates, and a refund policy you can actually honour.

01 Three delivery methods

02 Stopping casual resharing — what is realistic

03 Watermarking a sample

04 The delivery message

05 Support: the five messages you will actually receive

06 A refund policy you can honour

Delivery is where trust is won or lost. A buyer who pays and waits two days starts to worry. A buyer who pays and receives in eleven minutes tells three people.

This section gives you a delivery system that costs nothing, a support system made of five templates, and a refund policy written so that you can keep it rather than argue about it.

7.1 Three delivery methods that work here

01 Google Drive folder, view access

How: Upload the product to a folder. Share the folder so buyers can view and copy, not edit the original. Send the link.

Best for: Template packs and Sheets files, where the buyer needs their own editable copy.

Strengths: Free, works on any phone, the buyer gets an editable copy they own, you can update the master file and everyone sees the update.

Weaknesses: Requires a Google account, and the link can be forwarded. Drive access where you live is generally reliable but can be slow on a weak connection.

02 Telegram channel or group

How: Create a private channel. Post the file once. Add buyers as members after payment.

Best for: Study material, guides, anything where you want to post updates and answer questions in one place.

Strengths: Free, fast, familiar to local buyers, low data, and it gives you a communication channel with every buyer — the beginning of an audience you actually own.

Weaknesses: A member can forward the file. Telegram availability has been disrupted during national shutdowns, so keep a backup delivery method.

03 Direct file send plus a permanent link

How: Send the PDF directly in the chat where the buyer paid, then also send a permanent link they can return to.

Best for: A single-file product such as a guide, checklist or study pack, especially with buyers who are not comfortable with shared folders.

Strengths: Zero friction. The buyer has the file in their chat history forever, which many people find reassuring. Works on a very weak connection because the file is small.

Weaknesses: No easy way to push an update; you must track who has received what.

USE TWO METHODS, ALWAYS

Deliver through your main channel and give the buyer a second, permanent copy — a link or a direct file. Two reasons. First, files get deleted from phones when storage runs out. Second, if a platform is disrupted or an account has a problem, your buyer still has what they paid for, and you do not spend a week re-sending files during the exact period when you were hoping to sell more.

7.2 Stopping casual resharing — what is realistic

A digital file can be copied infinitely. You cannot prevent resharing, and any product or service that claims to prevent it is either expensive, inconvenient for your buyers, or both. What you can do is make casual resharing slightly awkward and price your product so that it does not matter much.

WHAT YOU CAN DO	WHAT IT STOPS	WHAT IT DOES NOT STOP
Put a small footer on every page: product name and your contact	Someone presenting your work as theirs at a distance	A determined copier — they can crop it

WHAT YOU CAN DO	WHAT IT STOPS	WHAT IT DOES NOT STOP
Put the buyer's name on their copy in the footer	Casual forwarding, because the forward visibly shows who leaked it	Anyone who does not care about being identified

WHAT YOU CAN DO	WHAT IT STOPS	WHAT IT DOES NOT STOP
Deliver through a private channel rather than a public post	The accidental free download by people who never paid	Members forwarding the file

WHAT YOU CAN DO	WHAT IT STOPS	WHAT IT DOES NOT STOP
Include a template or sheet the buyer must copy into their own account	Nothing — but the buyer's copy carries their own edit history	Copying the original
Price at the impulse level, $0.60–300	Most of the motivation to hunt for a free copy	A student group that shares everything regardless
Add value that cannot be copied: updates, a Q&A, a support channel	Nothing directly — but it makes paying the better choice	People who only want the file

THE HONEST CALCULATION

If 30 people buy and 20 more get it free from a friend, you have not lost 20 sales. Some of those 20 would never have paid at any price. What you have actually lost is the difference between what you sold and what you might have sold, and that number is much smaller than it feels. **Spend your energy on making the next product better, not on pursuing people who were never going to pay.** Section 08 covers what to do in the genuine case where someone is reselling your product commercially.

One thing you should not do: publicly accuse a buyer or a group of sharing your file. In your country's Telegram and Facebook groups, reputation travels fast, and an accusation aimed at the wrong person costs you more than the file was worth.

7.3 Watermarking a sample

A sample page is your best sales asset and your biggest leak risk. Handle it deliberately: put your watermark on the sample and keep it out of the paid file.

COPY-READY: SAMPLE PAGE FOOTER

SAMPLE — `[Product name]` by `[Your name]`. This is a preview page. The full version has `[number]` pages and `[number]` templates. Contact: `[your Telegram handle or phone]`.

Export the sample as a separate PDF with the watermark baked in. Never send the full file "with a note asking them not to share". That is not a sample; it is a giveaway.

7.4 The delivery message

Send this the moment you have confirmed the payment in your own app. It does four things: confirms what they bought, tells them how to open it, tells them what to do if it fails, and tells them how to reach you.

COPY-READY: DELIVERY MESSAGE

Selam `[buyer name]`, thank you — I have confirmed your payment of `[amount]` USD.

Here is `[product name]`:
File: `[link or attachment]`
Backup copy: `[permanent Drive link]`

How to open it: tap the file, then choose "Open with" and pick your PDF reader or Google Drive. If your phone asks which app to use, any PDF app works.

If something does not work: message me here and tell me what you see on the screen. I reply within `[24 hours]` and I will fix it or send the file another way.

Your refund: if this is not what you expected, tell me within 14 days and I will send your money back in full, no questions. You can keep the file.

If it helps you, I would be glad to hear which part was most useful — it is how I decide what to build next.

7.5 Support: the five messages you will actually receive

Almost every support question falls into one of five categories. Write the five replies once, save them in your notes app, and support stops being work.

THE MESSAGE	WHAT IS REALLY HAPPENING	YOUR REPLY
"The file will not open on my phone."	The phone has no PDF reader, or the download is incomplete	Template 1 below
"I paid but have not received it."	They paid a different number, or the confirmation has not reached you	Template 2 below
"Can you explain page 7?"	Genuine use. The best possible message — this buyer will buy again	Template 3 below
"Can I get a discount?"	Price objection, or a student with a real constraint	Template 4 below
"I want my money back."	Either a genuine mismatch or buyer's remorse	Template 5 below — refund immediately

COPY-READY: TEMPLATE 1 — FILE WILL NOT OPEN

Thank you for telling me. Usually this means your phone does not have a PDF reader installed. Please do this: open the Google Play Store, search "PDF reader", install any free one, then open my file again and choose that app. If it still does not open, tell me what you see on the screen and I will send you a different version. Your file is not lost — I have it and I will make sure you can read it.

COPY-READY: TEMPLATE 2 — PAYMENT NOT RECEIVED

Thank you for your patience. Please send me three things: the exact amount you sent, the phone number or account you sent it to, and the transaction reference number from your confirmation message. I will check my own app and if it is there I will send the file immediately. If it went to a different number, we will sort it out — do not send a second payment until I confirm.

That last sentence matters. Buyers who are worried send twice, and then you owe a refund on a payment you never asked for.

COPY-READY: TEMPLATE 3 — EXPLAINING A PAGE

Good question. Page **[number]** is about **[concept]**. The short version: **[two-sentence explanation in plain language]**. If it would help, send me a photo of how you have filled it in so far and I will tell you if it looks right.

Do not be afraid of this message. A buyer asking a question is a buyer using the product, and the answer you write here is material for version two.

COPY-READY: TEMPLATE 4 — DISCOUNT REQUEST

Thank you for asking. I am not able to lower the price of **[product]**, because it is already at the introductory price for the first ten buyers and it goes up afterwards. If the price is genuinely out of reach right now, two options: (1) I have a smaller version, **[name]**, at **[lower price]**; or (2) if you are buying for a group of five or more, message me and we can agree a group price. Either way, tell me if neither works and I will keep you on the list for the next free sample.

COPY-READY: TEMPLATE 5 — REFUND REQUEST

No problem at all. Please send me the wallet number or bank account you want the refund sent to, and I will send **[amount]** USD back today. You can keep the file. If you have two minutes, I would be grateful to know what you expected that it did not do — it helps me fix it for other people. But that is optional; the refund does not depend on it.

7.6 A refund policy you can actually honour

Most local digital sellers have no refund policy, which leaves the buyer to guess and the seller to argue case by case. A written policy removes both problems. Here is one that works at this scale.

COPY-READY: REFUND POLICY

Refund policy — [Product name]

If this product is not what you expected, tell me within **14 days** of purchase and I will refund you in full. No questions, no forms, no explanation required. You keep the files.

To request a refund, message me at [contact] with the name you paid under and the amount. I process refunds within [2 working days] to the wallet or bank account you paid from.

After 14 days I am not able to refund, because by then the file cannot be returned. If something in the product is broken or wrong, tell me at any time and I will fix it and send you the corrected version free.

This policy applies to products under [$4]. For bundles or products with a live element, the terms are stated separately on the sales page.

WHY 14 DAYS, NO QUESTIONS, AND ONLY UNDER $4

Why no questions: arguing costs you more time than the refund costs you money. A buyer who is refused an $1.50 refund will tell the group. A buyer who is refunded instantly usually tells the group that too, and then buys again later.

Why 14 days: it is long enough for a real buyer to open the file and try it, and short enough that you are not carrying an open liability for months. It is also a window a buyer can understand and remember.

Why the $4 cap: the higher the price, the more a refund decision deserves a conversation — and the more likely a bundle includes work you cannot take back, such as a live call or a review of the buyer's own documents. Above $4 state your terms on the sales page rather than promising an unconditional refund you may not be able to give.

The tradeoff, stated plainly: a no-questions refund policy will cost you some money from buyers who simply changed their mind. It buys you something worth more — a reason for a hesitant buyer to pay you instead of a stranger. Your refund rate on a good product will be low. If it is high, that is information: your sales page is promising something the product does not deliver.

EXPLAIN Delivery, support and refunds are not the boring part after the sale. They are the part that decides whether your first ten buyers produce the next thirty, because where you live your buyers are in the same Telegram groups as your future buyers.

SHOW A buyer in a regional city pays $1.50 at 21:40 and receives the file at 21:52 with a message that tells her how to open it and how to get her money back. She reads it on her phone the next morning on the way to work. When a colleague asks where she got it, she forwards the message — not the file. That forwarded message is your best marketing, and it costs you nothing to produce.

DO Save all five support templates and the delivery message in your phone notes now, before your first sale. Then set up your second delivery method — a Drive folder or a Telegram channel — so you have a backup on the day the first one fails.

CHECK Send your own product to a friend who knows nothing about it and ask them to open it and reply to you as if they were a confused buyer. If you can answer them in under two minutes using a template, your support system works.

08

SECTION EIGHT

Copyright, Licensing and Not Getting Into Trouble

What copyright protects automatically, what you must never copy, how to use free-licence assets properly, how to write your own licence, and what to do if someone resells your product.

01 What copyright protects, automatically

02 What you must never put in your product

03 Using free-licence assets and crediting them

04 Writing your own licence in plain language

05 Selling a template vs selling the right to resell

06 Someone is reselling your product — what to do

Most first-time digital sellers where you live get into trouble in one of two ways: they put something in the file they had no right to use, or they never told the buyer what the buyer is allowed to do with it.

Both are avoidable with a few sentences. This section is practical, not legal theory.

> **PLAIN STATEMENT FIRST**
>
> **This section is general guidance, not legal advice.** It is written to help you avoid obvious problems, not to advise you on a specific dispute. Copyright, licensing and trademark questions depend on facts, and local law and practice may have changed since this edition. If you have a real dispute, a real claim against you, or a real commercial deal worth money, consult a qualified local lawyer.

8.1 What copyright protects automatically

In your country, copyright protects original works from the moment they are created and fixed in a form — you do not have to register anything, apply anywhere, or pay a fee for the basic protection to exist. A document you wrote, a spreadsheet you designed, a set of questions you composed, a cover you drew: these are your works, and you hold the rights in them.

Two practical consequences follow immediately.

— **Your product is already protected** without any paperwork. You can put a copyright line on it and state your licence terms. That is enough to establish your position clearly, even though it is not a substitute for legal advice if a serious dispute arises.

— **Everyone else's work is also protected**, including work you find free on the internet. Free to read is not free to republish. A paragraph you copied from a website, a diagram from a textbook, a photo from a Facebook page — all of these belong to someone, and putting them in a product you sell is infringement.

Also note: **facts and ideas are not protected, but the expression of them is.** You can write your own guide explaining the same tax rate that appears in a government publication — that is a fact. You cannot copy the government publication's text and layout into your product and sell it.

8.2 What you must never put in your product

> **DO NOT INCLUDE ANY OF THESE**

— **Text copied from a book, website, blog or another course.** Even a paragraph. Even reworded slightly.

— **Images you found online.** Google Images results, Facebook photos, Pinterest images, screenshots of other people's designs. Being able to download it is not permission to sell it.

— **Fonts you do not have a licence for.** Many attractive fonts are licensed for personal use only, or for a limited number of users. Use the default fonts in your writing tool, or fonts explicitly offered under a free licence.

— **Exam papers, textbook questions or a school's internal material** that you did not write, unless you have written permission. Reproducing a national exam paper and selling the answer key is a serious problem, not a shortcut.

— **Another seller's templates, prompts or course content.** Buying someone's product does not give you the right to sell it or to repackage it as your own. See 8.5.

— **Music, video clips or voice recordings** you did not create or license, in a mini-course.

— **Software screenshots that include someone's private data** — a real customer list, a real patient record, a real invoice with a name on it.

— **Another company's name or logo** used to imply endorsement or to attract their customers.

THE AI DRAFTING TRAP

An AI chat tool can produce text that closely resembles existing copyrighted material, and it can produce images that resemble a living artist's style or a real brand. You are responsible for what you publish. If you use an AI tool to draft, treat the output as a first draft written by an unreliable assistant: rewrite it in your own words, replace any example with your own, and never publish an image or a passage you cannot account for. The verification rule from section 04 applies here too.

8.3 Using free-licence assets — and crediting them properly

There are genuinely free assets you can use, and using them correctly is a habit worth building now. The rule is simple: **check the licence on the page where you got the asset, not on the search results page**, and follow whatever it says about credit.

WHAT THE LICENCE SAYS	WHAT IT USUALLY MEANS FOR A PAID PRODUCT	WHAT TO DO
Public domain / CC0	No restrictions; you can use it commercially	Use freely. Crediting is polite but usually not required
Attribution licence	You can use it commercially if you credit the creator	Add a credit line with the creator's name, the asset title and the licence
Non-commercial licence	**You cannot use it in a product you sell**	Do not use it. Find another asset

WHAT THE LICENCE SAYS	WHAT IT USUALLY MEANS FOR A PAID PRODUCT	WHAT TO DO
No-derivatives licence	You cannot modify it	Use it unmodified only, or avoid it

WHAT THE LICENCE SAYS	WHAT IT USUALLY MEANS FOR A PAID PRODUCT	WHAT TO DO
"Free for personal use"	Not for a product you sell	Do not use it

WHAT THE LICENCE SAYS	WHAT IT USUALLY MEANS FOR A PAID PRODUCT	WHAT TO DO
Nothing stated	Assume all rights reserved	Do not use it. Ask the creator for written permission, or find an alternative

Licence names and terms vary by source and change over time. Always read the licence page for the specific asset you are using, on the day you use it.

COPY-READY: CREDITS PAGE

Credits and licences

Cover design and interior layout: [your name].

Icons: [asset title] by [creator name], used under [licence name]. Source: [link].

Photograph on page [number]: [creator name], used under [licence name]. Source: [link].

Figures and data in this product are taken from the public sources listed on page [number] and are used for information, not reproduced from any copyrighted work.

If you believe any material in this product infringes your rights, contact [contact] and I will remove or correct it promptly.

A credits page costs you half a page and it protects you twice: it satisfies attribution licences, and it demonstrates good faith if anyone ever raises a concern.

8.4 Writing your own licence, in plain language

Your buyers need to know what they are allowed to do. Say it in plain words on the second page of the product. Do not use legalistic language you do not understand — a clear sentence you can defend beats a copied licence clause you cannot.

COPY-READY: PERSONAL USE ONLY LICENCE

Licence — personal use

This product is licensed to [buyer name] for personal use. You may read it, print it for your own use, and use the templates and worksheets for yourself or your own household.

You may not: resell it, share the file, upload it anywhere public, use it to create a product you sell, or reproduce any part of it in another document you distribute.

Copyright [year] [your name]. All rights reserved.

COPY-READY: BUSINESS USE LICENCE

Licence — use in your own business

This product is licensed to [buyer name] for use in your own business or professional practice. You may use the templates with your own clients, put your own business name on them, and adapt the wording for your own use.

You may not: resell this product or any template from it, offer it as a free download or bonus, share the file with other businesses or colleagues, or include it in a product or course you sell. Each business needs its own licence.

Copyright [year] [your name]. All rights reserved.

COPY-READY: TEAM LICENCE ADD-ON

Licence — team use

This licence covers up to [number] people within [organisation name]. Each person may use the templates and worksheets in their own work for this organisation. The licence does not transfer if you leave the organisation, and the organisation may not share or resell the files.

Copyright [year] [your name]. All rights reserved.

WHICH LICENCE SHOULD YOU USE?

Default to **personal use** for study material, guides and prompt collections. Move to **business use** for invoices, contracts, pricing calculators and client-facing templates — and price those higher, because a business using your template to bill its own clients is getting more value than a student reading your guide. Add the **team licence** as a higher-priced option when a company asks; it converts a "can my colleague use it too?" question into a sale instead of a leak.

8.5 Selling a template vs selling the right to resell it

This is the distinction that causes the most damage, because it is easy to give away by accident.

	SELLING THE TEMPLATE	SELLING RESALE RIGHTS
What the buyer gets	A file they can use themselves	Permission to sell the file to other people
What you get	Payment once per buyer	Payment once, and then you compete against your own buyer
Typical price	$1.50–600, or $5+ for a business licence	Very high, or not at all
Effect on your future sales	Each new user pays you	Your buyer's customers will never pay you
Recommended	**Yes, this is your business**	Almost never, and never by accident

The dangerous phrase is **"you can use this however you want"**. A buyer who reads that and then resells your template pack on a local classifieds site is not being dishonest — you gave them permission. Write the licence explicitly, and never sell resale rights unless you have deliberately decided to, priced accordingly, and are prepared to stop selling that product yourself.

8.6 Someone is reselling your product — what to do

It happens. Here is the sequence, in order, with the cheapest step first.

1. **Check your own licence wording first**

   Before you accuse anyone, read what you actually wrote. If your file said "use it however you like" or had no licence at all, you have a weak position and the honest move is to fix the wording on future sales rather than start a fight.

2. **Gather evidence, quietly**

   Take screenshots showing the listing, the price, the date, and any part of your file that appears in it — your footer, your layout, your wording. Save the links. Do not post about it publicly yet.

3. **Send one direct, polite message**

   Most resellers are individuals who did not think about it. One calm message resolves most cases.

4. **Report to the platform**

   If the message is ignored, use the platform's own reporting process — a local classifieds site, Facebook, Telegram and Google Drive all have a way to report infringing content. State plainly that you are the rights holder and provide your evidence.

5. **Consult a lawyer if it is commercially serious**

   If someone is running a real business on your product at real volume, that is the point at which professional advice is worth paying for. This course cannot advise you on a specific dispute, and no amount of reading replaces a qualified local lawyer.

COPY-READY: FIRST MESSAGE TO A RESELLER

Selam. I am the creator of `[product name]` and I saw your listing at `[link]`. That file is licensed for personal use only and cannot be resold — the licence is on page 2 of the document.

I am not looking for a problem. If you take the listing down, I will consider it finished and I will not take it further. If you would like to sell it legitimately, message me and we can talk about that separately.

Thank you.

Notice what this message does not do: it does not insult, threaten, or accuse of theft. It states the fact, offers an easy exit, and leaves a door open for a legitimate arrangement. That resolves more cases than any threat.

EXPLAIN Copyright gives you the rights in what you created, automatically and without registration. Licensing is how you tell other people what they may do with it. Skipping the licence does not make you generous — it makes your terms unclear, and unclear terms are how small creators end up arguing with buyers and losing.

SHOW

Example scenario — fictional. Marta in a regional city sells a pack of 12 wedding-invitation templates at $2.50. Her page 2 licence says business use is allowed, resale is not, and each event business needs its own licence. A print shop asks to buy once and use it for all its customers. She replies with the team licence at $8. The shop pays. Because she had written the terms down, a leak question turned into her highest-priced sale of the month.

DO

Open your product file and add three things today: a copyright line with the year and your name, a licence paragraph on page two using one of the three templates above, and a credits line for anything in the file that you did not create yourself.

CHECK

Hand the file to a friend and ask one question: "What am I allowed to do with this?" If their answer does not match your intention, your licence is not clear enough yet.

09

SECTION NINE

Selling Without an Audience

Five launch channels that work where you live when you have no followers, the exact messages for each, and a 14-day launch sequence you can start today.

01 Why "build an audience first" is bad advice for you

02 The five launch channels

03 Messages for each channel

04 The 14-day launch sequence

You do not need an audience. You need about fifty specific people and a reason for them to look at what you made.

Building a following first is slow, and it delays the one thing that teaches you how to sell: selling. This section uses the people you already have access to, in the order that produces a first sale fastest.

9.1 Why "build an audience first" is bad advice for you

Social media reach where you live is genuinely small relative to the population — around 9.80 million social media identities, roughly 7.2% of the population, or about 13.2% of adults aged 18 and over. Facebook reaches about 9.80 million people, Instagram about 1.55 million. Growing a following from zero to something that reliably sells takes months of consistent posting, and most people quit in week three.

Meanwhile, you have direct access to hundreds of people right now: your phone contacts, the Telegram groups you are already in, the Facebook groups where your buyers already ask questions. Direct access beats reach. Fifty people who know you and have the problem will outsell ten thousand strangers who scrolled past.

WHAT TO DO INSTEAD OF BUILDING AN AUDIENCE

Sell to fifty specific people first. Every one of those sales teaches you something an audience never would: which sentence made them reply, which question they asked before paying, which objection they raised. **Build the audience after you have something to sell them** — section 10 shows how, and Course 08 is entirely about it.

9.2 Channel 1 — Your own Telegram and phone contacts, messaged one by one

This is the highest-converting channel you have and almost nobody uses it properly. The mistake is broadcasting. A broadcast to 200 contacts looks like advertising and gets ignored. Fifty individual messages get read, because each one is addressed to a person who knows you.

NEVER USE THE BROADCAST LIST FOR THIS

A Telegram broadcast or a WhatsApp list message is received as a forward. The recipient knows it went to everyone. A personal message a person believes was written to them only converts many times better. Type fifty messages. It takes about an hour.

COPY-READY: PERSONAL LAUNCH MESSAGE

Selam `[name]`. I remember you `[mentioned / asked about]` `[the problem]` — I have finally put together `[product name]`. It is `[what it is in 8 words]`, and there is a preview here: `[link]`.

It costs `[price]` USD and I will send it to you as soon as you pay. If it is not useful for you, tell me and do not worry about it — I am asking you because I thought it might be relevant, not to pressure you.

Note the ending. Giving people an easy way to say no makes the yeses real, and it keeps the relationship intact for your next product.

Target:

Realistic range:

9.3 Channel 2 — Facebook groups where your buyers already are

Join the groups your buyers use. Not groups for sellers — groups for buyers. If you sell study packs, join Grade 12 and university department groups. If you sell business templates, join small-business-owner groups in your city. Read for several days before posting anything.

Then post helpfully, twice, before you post anything commercial.

1. **First post — give the answer away free**
   Answer a real question in the group properly and completely. No mention of your product. This establishes that you know what you are talking about.
2. **Second post — give more of the answer away**
   Post the one-page version of your method for free. Ask if people want the extended version. Watch the comments. Every comment is a signal.
3. **Third post — offer the product to the people who asked**
   Reply to each interested person individually with the sales page. Do not spam the group with the link.

COPY-READY: HELPFUL FACEBOOK GROUP POST

[Question people keep asking] — here is how I handle it. [Four or five concrete steps, with real numbers.]

This is the short version. I wrote up the full version with the [templates / examples / answer key] because people kept asking me the same thing. If it would help you, comment or message me and I will send you the details. Either way, the steps above work on their own.

RESPECT EVERY GROUP'S RULES

Many Facebook and Telegram groups ban selling or ban links. Read the group rules before posting. If selling is banned, do not sell in the group — answer questions there and let people message you. Getting removed from the group where your buyers live costs you the channel permanently.

9.4 Channel 3 — a local classifieds site listings

a local classifieds site is a live, dollars-priced classifieds marketplace with Addis district filters and categories including Services and Business & Industry. It is a place where people are already in a buying frame of mind — which is different from social media, where they are not.

DO	DO NOT
Write a clear title that names the group and the outcome — "Invoice template pack for small shops"	Write a clever title nobody searches for
Put the price in the listing	Write "price negotiable, DM me" — most buyers skip these
Show two or three real preview images of the actual product	Use a stock image or a screenshot of a different product

DO	DO NOT
State the file format and how delivery works	Leave the buyer guessing what they receive

DO	DO NOT
Answer messages within a few hours	Let messages sit for two days — the buyer has already bought elsewhere

DO	DO NOT
Renew or refresh your listing regularly	Post once and forget it

a local classifieds site listing rules, fees for promoted listings, and category requirements change. Check the current rules on a local classifieds site before you list.

9.5 Channel 4 — Existing clients and colleagues

If you already work — tutoring, freelancing, accounting, teaching, nursing, a shop — you have a list of people who have already paid you for something. They are the warmest buyers you will ever have, and they are usually forgotten because they feel too obvious.

Message every past client and colleague who fits the problem statement. Tell them what you built, why, and what it costs. Ask them to forward it to one person who might need it. A referral from a satisfied past client converts better than any post you will ever write.

COPY-READY: PAST-CLIENT MESSAGE

Selam `[name]`. When we worked together on `[project]`, `[the recurring problem]` came up more than once. I have put together `[product name]` for exactly that — `[one line on what it does]`. It is `[price]` USD.

No obligation at all. And if you know one person who has this problem, I would be grateful if you passed it on.

9.6 Channel 5 — One short TikTok or Instagram series

A single series, not a channel strategy. Five to seven short videos, each showing the problem your product solves, posted over two weeks. The point is not to go viral — with Instagram reach around 1.55 million people where you live, virality is not a plan. The point is to give the people you message something to look at, and to give strangers one way to find you.

VIDEO	WHAT IT SHOWS	LENGTH
1	The problem, named exactly — "this is why your shop does not know if it made money last month"	20–30 s
2	The wrong way people currently handle it, and what it costs	20–30 s
3	One step of your method, done on screen with real numbers	30–45 s
4	A second step, or a common mistake and its fix	30–45 s
5	A before-and-after: the messy version and the finished version	20–30 s
6	What the product is, who it is for, the price, and how to get it	20–30 s

Record on your phone. Vertical. Good light. Speak clearly in the language your buyers use. Do not spend money on editing software — free mobile editors that work on Android are widely available, and free plans change their limits, so verify the current free limits before building a workflow on one.

9.7 The 14-day launch sequence

Run this after the product is finished, the price is set and the sales page is written. Every day has one task. Do not skip days to catch up; if you miss a day, continue where you left off.

DAY 01 Prepare the assets

OBJECTIVE Have everything ready before anyone sees anything.

TASK Finalise the product file. Create the sample PDF with the watermark from section 7.3. Upload the product to your delivery folder or channel. Write your sales page text into a phone note so you can paste it anywhere.

OUTPUT One product file, one sample file, one delivery link, one page of sales text.

CHECK

- [ ] I opened my own product file on my own phone and it works
- [ ] My sample PDF has the watermark and does not contain the full product
- [ ] My sales text includes price, payment number and delivery promise

DAY 02 Test the money route

OBJECTIVE Know that money can reach you before you ask anyone to send it.

TASK Ask a friend to send you $1 to your wallet. Confirm it in your own app. Screenshot the confirmation. Send the $1 back and confirm that works too.

EXAMPLE Do this with the exact wallet number you will publish, not a different one.

CHECK

- [ ] I can see the sender's name and the amount in my own app
- [ ] I can send money back without an error
- [ ] Two-factor authentication is working on my wallet

DAY 03 List fifty names

OBJECTIVE Turn "everyone" into fifty real people.

TASK In a Google Sheet or phone note, list fifty people who fit your problem statement: phone contacts, colleagues, past clients, classmates, group members. Write their name and one line on why they fit.

OUTPUT A list of fifty with a reason next to each.

CHECK

- [ ] Fifty names, not forty-nine
- [ ] Each one has a reason, not just a name
- [ ] None of them is a stranger I have never spoken to

DAY 04 Message the first fifteen

OBJECTIVE Start the personal channel, which is your best one.

TASK Send the personal launch message from 9.2 to fifteen people. One at a time. Type each one.

CHECK

- [ ] Fifteen individual messages sent, not one broadcast
- [ ] Each message uses the person's name
- [ ] Each message has a clear price and a clear next step

DAY 05 Message the next fifteen

OBJECTIVE Continue, and start reading the replies as data.

TASK Send fifteen more. In your sheet, write down what each person who replied actually said — especially any objection. Objections are the raw material for your FAQ.

OUTPUT A list of real objections in the buyers' own words.

CHECK

- [ ] Thirty messages sent in total
- [ ] I have written down every objection word for word

DAY 06 Answer the objections publicly

OBJECTIVE Turn the objections you collected into the FAQ on your sales page.

TASK Add three to five FAQs using the exact words people used. Post the helpful version from 9.3 in one Facebook group where your buyers are.

CHECK

- [ ] My FAQ answers use the buyer's own phrasing, not mine
- [ ] I posted something genuinely useful that does not mention my product

DAY 07 Deliver, and ask one question

OBJECTIVE Make your first buyers into your first reviewers.

TASK Deliver every sale using the message from 7.4. Then, three days after each delivery, send one question: "Which part was most useful, and what was missing?"

CHECK

- [ ] Every buyer received the delivery message, not just a file
- [ ] Every buyer was told about the 14-day refund
- [ ] My sales record has date, name, amount and reference for each sale

DAY 08 Publish the a local classifieds site listing

OBJECTIVE Reach people who are already shopping.

TASK Create the listing using the do-and-do-not table in 9.4. Price it in the listing. Use two or three real preview images. Check the listing rules first.

CHECK

- [ ] Price is visible in the listing
- [ ] Preview images show the real product
- [ ] Delivery method and file format are stated

DAY 09 Record the first three short videos

OBJECTIVE Give people something to look at when they hear about you.

TASK Record videos 1, 2 and 3 from the table in 9.6. Publish one per day for the next three days.

CHECK

- [ ] Vertical video, recorded on my phone
- [ ] I speak clearly in the language my buyers use
- [ ] Video 1 names the problem in the first five seconds

DAY 10 Message the last twenty

OBJECTIVE Finish the fifty. Most people stop at thirty.

TASK Send the remaining twenty personal messages. Update your sheet with every reply.

CHECK

- [ ] Fifty of fifty messages sent
- [ ] Every reply is recorded
- [ ] I have replied to every person who answered me

DAY 11 Ask for referrals

OBJECTIVE Turn buyers into a second channel.

TASK Message every buyer and every person who replied positively. Ask them to forward the preview to one person who has the same problem. Give them the sample PDF to forward, not the full file.

EXAMPLE "If you know one person who has this problem, would you send them the preview? It is one page and it costs them nothing to look."

CHECK

- [ ] Every buyer was asked once, politely, with no pressure
- [ ] I sent them the sample file, not the product

DAY 12 Second Facebook group, second post

OBJECTIVE Repeat what worked in a second place, without repeating yourself word for word.

TASK Join one more group where your buyers are. Post a different genuinely useful piece of content — a different question answered, or a short case with real numbers.

CHECK

- [ ] The post is useful even if nobody buys
- [ ] I checked the group rules
- [ ] I am answering comments, not just posting

DAY 13 Review the numbers honestly

OBJECTIVE Find out which channel worked, and why.

TASK Fill in the review table below. Write down how many messages, how many replies, how many sales, and where each sale came from.

OUTPUT A row per channel showing messages sent, replies, sales and revenue.

CHECK

- [ ] Numbers written down, not remembered
- [ ] I know which single channel produced the most sales
- [ ] I know the most common objection I received

DAY 14 Decide the next move

OBJECTIVE Convert fourteen days of work into a decision, not a feeling.

TASK Read your review table and choose one of three: (a) the product sells — start version two or build the second product; (b) people are interested but do not buy — rewrite the sales page using the objections you collected; (c) nobody is interested — change the problem, not the price, and go back to section 02.

CHECK

- [ ] I chose one of the three paths, in writing
- [ ] My next 14 days have a task for each day
- [ ] I have not changed my price to solve a demand problem

Launch review table

CHANNEL	SENT	REPLIES	SALES	REVENUE	NOTE
Personal messages	50				
Facebook groups	2 posts				
a local classifieds site listing	1				
Past clients and colleagues					
TikTok / Instagram series	3–6 videos				
Referrals from buyers					

Revenue here is arithmetic from your own recorded sales. It is not a target and it is not a prediction.

EXPLAIN Direct access beats reach. Fifty people who know you and have the problem will outperform a large passive audience every time, because a personal message carries context that a post cannot.

SHOW **Example scenario — fictional.** Bereket in a regional city sells a $1.25 checklist for first-time renters. He messages 50 people, gets 11 replies, 4 sales from the personal channel, 2 from a Facebook group post, 1 from a local classifieds site, and 2 referrals. Nine sales, $11 one channel clearly ahead. He also collected four objections about whether the checklist covers shared housing — which becomes version two. No audience was built. A product was sold.

DO Do Day 01 and Day 02 today. Prepare the assets and test your wallet. Then start Day 03: write the first twenty names on your list of fifty.

CHECK You are ready to launch when the product file works on a phone you do not own, the sample is watermarked, the sales text contains the price and the payment number, and you have received at least one test payment into your own wallet.

10

SECTION TEN

Scaling: The Second Product, the Bundle, Version Two

How to read your first ten sales, when to raise the price, how to bundle two products, how to add a live element that justifies a higher price, and how to build a buyer list you actually own.

01 Reading your first ten sales

02 When to raise the price

03 Version two: fixing what buyers told you

04 Bundling two products

05 Adding a live element legitimately

06 Building a list you own

Ten sales is the most information you will ever get about your product for free. Most sellers ignore it and move on to something new. This section is about reading it.

Scaling here does not mean ten thousand sales. It means the second product is easier than the first, the price is higher, and you own a way to reach your buyers again.

10.1 Reading your first ten sales

You are looking for four things, and each one points to a different action.

WHAT YOU OBSERVE	WHAT IT MEANS	WHAT TO DO
Buyers came mostly from one channel	That channel matches how your buyers actually behave	Do more of that one. Stop spreading effort across five
The same question appears in three or more support messages	Your product is unclear at that point	Fix the product — add a page or a sentence — and update the file for everyone
People ask for something the product does not have	You have found your version two, or your second product	Write it down. Do not build it yet — finish selling version one first
Most buyers paid without asking anything	Your sales page is doing its job	Leave it alone. Raise the price as planned
People say "I will buy next month" and never do	The price is not the problem; the urgency is	Add the live element from 10.5, or a dated group intake
No sales at all, but interest	The problem is real, the offer is unclear or the price is misaligned	Rewrite the sales page with the objections you collected. Do not lower the price
No sales and no interest	The problem is not painful enough	Go back to section 02 and pick a different problem

THE THREE QUESTIONS TO ASK EVERY BUYER

Send these to every buyer three days after delivery. Most will not reply. The ones who do will tell you more than any survey.

— "Which part was most useful to you?"

— "What was missing, or what did you expect that was not there?"

— "What were you doing about this problem before you bought it?"

10.2 When to raise the price

Section 05 told you to start lower and raise after ten buyers. Here is the detail.

1. **Raise when you have ten sales and nobody complained about the price**
   Ten buyers paid without arguing. That is evidence the price was not the obstacle. A modest increase — for example $1.50 to $2 — is almost always absorbed without a drop in sales, because the buyers who were hesitating at $1.50 were hesitating about the product, not the number.

1. **Raise when you have added something real**

   Version two with new templates, a new section, or an answer key is a different product. Raising the price at the same moment you add value is fair and easy to explain: "the new version includes X, so the price is now Y."

1. **Raise for inflation, once a year, as a matter of routine**

   Education inflation was 25.3% year-on-year in August 2026, against headline inflation of 15.1%. A price that stays fixed for two years is falling in real terms. Put a date in your calendar twelve months from now and re-price then, as a normal business action, not an apology.

2. **Tell early buyers they keep their price**

   Say on the sales page that buyers at the old price keep the old price on future updates. It rewards the people who took the risk on you, and it makes the increase feel fair to everyone watching.

> **DO NOT RAISE THE PRICE TO FIX WEAK SALES**
>
> A higher price does not create demand. If nobody bought at $5, $10 will not help. Fix the offer, the audience or the problem first — then raise the price once people are buying.

10.3 Version two: what to fix

Version two is not a rewrite. It is the smallest set of changes that removes the top three reasons buyers were confused or disappointed.

SIGNAL FROM BUYERS	VERSION TWO CHANGE	EFFORT
"I did not understand page 6"	Add a worked example on that page	1 hour
"There is nothing for my situation"	Add one extra template or section for that case	3–6 hours
"I wanted it in the local language"	Translate the quick start and the checklist only — not the whole file	4–8 hours
"The numbers are not realistic for my city"	Add a second worked example with different numbers	2 hours
"I could not open it"	Re-export with selectable text and a smaller file size	30 minutes

Send the updated file to every existing buyer, free. Say what changed. Buyers who receive an unrequested improvement become the people who recommend you, and a recommendation costs you nothing while a new buyer costs you a day of outreach.

10.4 Bundling two products

A bundle sells two or more related products together at a price lower than buying them separately but higher than either alone. It works because it moves a buyer from "should I buy this?" to "which one do I buy?" — and because the second product already exists and costs you nothing extra to deliver.

BUNDLE ARITHMETIC — EXAMPLE, NOT A FORECAST

```
Guide $2 + template pack $3 = $5 separately
Bundle price: $650
```

```
Buyer saves $1. You gain a higher-value sale.
```

The bundle only makes sense when the two products solve parts of the same problem for the same person. "Two things I made" is not a bundle.

GOOD BUNDLE	BAD BUNDLE
A pricing guide plus the pricing calculator sheet	A pricing guide plus a photography preset pack
Exam practice questions plus the formula sheet	Exam practice plus a business invoice template
Lesson plans plus the printable worksheets	Lesson plans plus a social media content calendar

The test: could one person reasonably need both, in the same week, for the same goal? If not, they are not a bundle.

10.5 Adding a live element to raise the price legitimately

Information is nearly free. Access and accountability are not — which is why GlobeDock Academy can charge $16 for a full year of unlimited tutoring access while free courses are available. You can add a live element with no platform, no licence and no cost, and it is the most defensible reason to charge more.

LIVE ELEMENT	WHAT IT IS	PRICE EFFECT (EXAMPLE)	EFFORT
A group Q&A call	One hour on a free voice or video call for all buyers of that intake	+$1.25–400	1 hour per intake
A closed Telegram group	Buyers can ask questions for 30 days	+$1–300	15 min/day
A review of the buyer's own work	You look at their filled-in sheet or document and comment once	+$2–600	20 min per buyer
A monthly group call	Recurring, for a separate higher-priced tier	Recurring fee	1–2 hours/month

Price effects are teaching examples for the local consumer market, not market data.

ONLY SELL A LIVE ELEMENT YOU WILL DEFINITELY DELIVER

A live call creates an obligation with a date on it. If you sell thirty places and cancel, you owe thirty refunds and your reputation takes the hit in every group those thirty people belong to. Start with a capped intake — five to ten people — and raise the cap only after you have run it once and know you will show up.

State clearly how the call happens: which app, what time, what happens if someone cannot attend, and whether a recording will be shared. Vague live promises are the fastest route to a refund request.

10.6 Building a list you actually own

Your buyers found you through channels you do not control. A Facebook group can remove you. A platform can change its rules or its fees. A network can be disrupted. What you keep is a direct way to reach the people who have already paid you.

A Telegram channel

Why it works: Free, familiar to local buyers, low data, and you can post a file, a price and a link in one place. Subscribers get a notification, which no algorithm can suppress.

How to build it: Create it before you need it. Add every buyer at delivery and ask permission in the delivery message. Post something useful once a week, not only when you are selling.

Weakness: Telegram availability has been disrupted during national shutdowns. It is your best channel, not your only one.

An email list

Why it works: Nobody can take it away from you, and it survives platform changes. It is also the least crowded channel where you live, which means your message gets read.

How to build it: Collect addresses with permission at the point of sale or in exchange for a free sample. Keep them in a spreadsheet with the date and where they came from.

Weakness: Most local buyers use email less than Telegram. Keep both; do not choose.

COPY-READY: BUYER-LIST PERMISSION LINE, ADDED TO THE DELIVERY MESSAGE

One more thing: I have a Telegram channel where I post [what you post — updates, new templates, short tips], usually once a week. Would you like me to add you? Reply "yes" and I will. If not, no problem — I will still message you directly about updates to what you bought.

Asking is the point. Adding buyers without asking is how you end up with a channel full of people who mute you.

WHAT YOUR LIST IS ACTUALLY WORTH

Your first product might sell 30 copies. Your second product, announced to those same 30 buyers plus everyone who asked about the first one, starts with an audience of warm contacts instead of zero. That is the entire compounding effect of digital products, and it is the only one this course will claim. **It is not passive income. It is a shorter second launch.**

Keep a simple record for every person: name, phone or Telegram handle, what they bought, when, and what they asked for. That sheet is the most valuable file you will create in this entire process.

EXPLAIN Scaling a digital product business means three things: fewer channels done properly, a higher price justified by added value, and a list of buyers you can reach without asking permission. It does not mean more products.

SHOW **Example scenario — fictional.** Meron sells a $1.50 study pack from a regional city. Ten sales, nine from personal messages, one from a Facebook group. Three buyers asked for a version with more practice questions — that is version two at $2. Two buyers asked for a formula sheet, which she adds as a separate $1 product and bundles with the pack at $2.50. She adds a 30-day Telegram group at $1 extra and caps it at ten people. Her channel has 46 members, all buyers or askers. The second launch starts from 46 people, not from zero.

DO Create your Telegram channel today, even if it has one member. Then build the buyer record sheet: name, contact, product, date, amount, transaction reference, and what they asked for.

CHECK You are ready for a second product when you can answer three questions: which channel produced most of my sales, what the top three buyer requests were, and how many people I can reach directly without a platform's help. If you cannot answer all three, you are guessing about your own business.

CLOSING

Common Mistakes, and the Fix for Each

Fourteen mistakes that account for most failed first digital products where you live. Read them before you build, and again after your first ten sales.

Mistake 01 — Building before validating

What happens: You spend three weeks writing, publish, share in five groups, and hear nothing. You conclude that locals do not pay for digital products.

The fix: Message ten people in the target group before you write a word. Get three to say they would pay. If you cannot, change the idea.

Mistake 02 — Choosing a topic instead of a problem

What happens: "A guide to digital marketing" attracts nobody, because nobody wakes up wanting a guide to a topic. They wake up with a problem.

The fix: Use the problem statement formula in 2.3. If the statement does not name a group, an outcome and a cost, it is a topic, not a product.

Mistake 03 — Letting the scope grow every week

What happens: A 20-page guide becomes a 70-page book with a tax chapter you are not qualified to write. You stop. Nobody sees it.

The fix: Write your hard cap down before you start. When you hit the cap, you cut. Ship on day 14 whatever state it is in.

Mistake 04 — Pricing by feeling instead of by the market

What happens: You price at $0.30 because you are afraid, or at $12 because you saw an American course at that price. Neither matches the your local market.

The fix: Use the anchors: local e-books around $1.25 paperbacks around $3 Kuraztech courses between $1 and 499. Start in the $0.60–300 band and raise after ten sales.

Mistake 05 — Lowering the price when nobody buys

What happens: Weak sales, so you cut the price in half. Sales barely move, and you have permanently devalued the product and trained your buyers to wait for discounts.

The fix: Change the idea, the group or the deliverable. If people want it at $2 they will buy at $2. If they do not want it, $0.60 will not change that.

Mistake 06 — Publishing unverified AI output

What happens: An AI tool produces a confident answer key, tax figure or medical instruction. You publish it unchecked. It is wrong. The buyers who relied on it tell everyone.

The fix: Verify everything you publish. Use AI for scaffolding and rewriting; put your own verified local detail inside it.

Mistake 07 — Delivering on a payment screenshot

What happens: A buyer sends an edited screenshot. You deliver. The money never arrives, and chasing it costs more than the sale.

The fix: Open your own wallet or bank app and confirm the amount and the sender's name. No confirmation, no file. Every time, without exception, including for people you know.

Mistake 08 — Designing the payment system before you have a buyer

What happens: You spend two weeks trying to get a merchant gateway account as an unlicensed individual, fail, and conclude that selling online where you live is impossible.

The fix: Your first fifty sales need a wallet number and a habit of confirming transfers. That is the whole system. Merchant gateways come later, after the licence.

Mistake 09 — No written licence

What happens: A buyer asks whether their colleague can use it, or whether they can use it for client work. You have no answer, so you say yes, and the file circulates.

The fix: Put a licence paragraph on page two, using one of the three templates in 8.4. Personal use, business use, team licence. Decide deliberately.

Mistake 10 — Using images, fonts or text you do not have the right to use

What happens: You put a photo from Facebook and a downloaded font in a product you sell. Someone notices, or the file is reported, and your product is taken down or you face a claim.

The fix: Use only what you created, what is explicitly free for commercial use, or what you have written permission for. Add a credits page.

Mistake 11 — Selling to businesses before you can afford the delay

What happens: A shop owner promises to buy for his whole team, asks for the file first, and never pays. Over 80% of federal business licences issued went dormant during 2025 — business buyers can be excellent, and they can also vanish.

The fix: Take payment before delivery, always. Build your first ten sales on individual consumers who pay once and leave you alone.

Mistake 12 — No refund policy, or one you cannot honour

What happens: A buyer asks for their money back. You argue. They tell the group. Or you promise an unconditional refund above $4 and then discover you cannot give it on a bundle with a live call.

The fix: Write the policy from 7.6: 14 days, no questions, products under $4 separate terms stated for bundles. Refund immediately when asked.

Mistake 13 — Broadcasting fifty people instead of messaging them

What happens: You send one broadcast to 200 contacts. It reads as an advertisement, gets ignored, and the people who would have bought never see it as a personal recommendation.

The fix: Type fifty individual messages with each person's name. It takes about an hour and converts many times better.

Mistake 14 — Chasing people who share your file

What happens: You find your product in a group for free, get angry, publicly accuse someone, and lose more reputation than the file was worth.

The fix: Accept that files can be copied. Price at the impulse level. Add updates and support that cannot be copied. If someone is genuinely reselling commercially, follow the five steps in 8.6 — starting with a polite message.

Mistake 15 — Building the audience before the product

What happens: Three months of posting, a few hundred followers, no product, and no idea whether anyone would buy.

The fix: Sell to fifty specific people first. Build the audience afterwards, with something to sell them.

Mistake 16 — Never asking buyers anything

What happens: You sell thirty copies and learn nothing. Version two is a guess. The second product repeats the first product's mistakes.

The fix: Three days after every delivery, ask the three questions in 10.1. Record the answers in your buyer sheet.

CLOSING

Frequently Asked Questions

How much can I charge?

Look at the anchors rather than at your hopes. Locally published e-books sell for around $1.25 an ordinary paperback novel averages $3 and Kuraztech prices individual courses between $1 and 499 with its own filter topping out at "250+". For a first product, use $0.60–300 for a small guide or checklist, $2–600 for a substantial resource, and $5–1,500 for a bundle or a product with a live element. Then start at the lower end and raise the price after your first ten buyers.

Do I need a business licence to sell a PDF?

Not to receive payment from individuals. Wallet-to-wallet transfers and personal bank transfers are legitimate routes for an individual with no business licence — the wallet limits under your regulator your payment-system rules apply, but they are far above what a new seller will reach. You **do** need a registered business if you want a merchant gateway account: a local card-and-wallet gateway's published requirement is a trade licence, a TIN certificate and a Memorandum of Association. A TIN is mandatory in any case. Confirm your own position with your local tax office.

How do I take payment from a foreign buyer?

Use your regulator-licensed remittance corridor — Western Union, MoneyGram, Ria, Remitly, WorldRemit, Taptap Send, TalkRemit, Xpress Money, Transfast, Thunes, Alansari, or a wallet corridor such as a wallet remittance corridor, a wallet remittance corridor or a mobile-money wallet. Your buyer sends, you receive dollars as cash, bank deposit or wallet credit. The sender pays the transfer fee and the exchange spread. Do not use unlicensed remittance — your regulator states it is illegal and punishable. Do not fake your country to open an account elsewhere.

Can I use PayPal, Payoneer, Wise or Stripe?

Not as a verified direct receiving rail, as far as this course could confirm in September 2026. PayPal appears on your regulator's licensed remittance list as an inbound money transfer provider — which is a different thing from you holding a PayPal account to bill clients, and that remains unconfirmed. Payoneer's country page could not be read, Wise's onboarding of people in countries with limited payment access is unconfirmed, and Stripe does not list your country. **Check the platform's own supported-countries page before you build anything on it, and treat any unverified claim as unverified.**

What if someone shares my file for free?

Some sharing will happen, and you cannot prevent it. Price at a level where most people would rather pay than hunt for a copy, put a small footer with the buyer's name on their copy, and add value that cannot be copied — updates, a support channel, a Q&A. If someone is reselling it commercially, follow the five steps in section 8.6, starting with a polite message. Do not publicly accuse people; where you live's group culture, a wrong accusation costs more than the file.

Do I need an audience?

No. Around 9.80 million social media identities exist where you live — about 7.2% of the population. Building a following from zero takes months. Fifty individual messages to people who know you will produce your first sales far faster. Build the audience afterwards, with something to sell them.

Can I sell on my phone?

Yes, for guides, checklists, prompt collections and study material. You can write in Google Docs mobile, export to PDF, upload to Drive and deliver through Telegram without ever touching a laptop. Template packs are harder on a phone because spreadsheet formulas are painful to build on a small screen — borrow a laptop for an afternoon if you can. Test the finished file on a phone that is not yours before you sell it.

What if nobody buys?

Then you learn something specific. Go back to your launch review table in section 9.7 and read which of three situations you are in: interest but no sales means the offer or the page is unclear; no interest at all means the problem is not painful enough. In the first case, rewrite the sales page using the objections you collected. In the second, go back to section 02 and choose a different problem. Do not lower the price to solve a demand problem.

Should I sell on an international platform?

Only after you have checked that platform's current supported-countries page yourself, on the day you plan to build on it. Registration eligibility and payout eligibility are two different questions and both vary by platform and change without notice. There is no verified local payout route on the major platforms as far as this course could establish. The verified international route is the licensed remittance corridor in section 6.4.

Do I need to pay tax?

A TIN is mandatory. On the tax itself: Turnover Tax under your country’s turnover-tax rules is 2% on goods sold locally and 10% on other services, and where VAT applies, TOT does not. VAT is governed by Proclamation No. 285/2002, and registration may be cancelled if twelve-month taxable transactions are expected to be at or below $500,000, with records kept for ten years. The presumptive or "Category C" small-taxpayer details could not be verified for this course. **Confirm your own position at your local tax office or with an accountant — this course is not tax advice.**

Can I use AI to write it?

You can use it to draft, outline and rewrite. You must verify everything you publish — every number, formula, exam answer, and local-specific claim. And AI cannot supply your unfair advantage: the real prices in your market, the questions your lecturer actually sets, the paperwork your local district office actually asks for. Use it for scaffolding, put your own verified detail inside it, and say so if a buyer asks.

What about copyright?

Copyright protects your original work automatically from the moment it is created where you live — you do not need to register anything for the basic protection to exist. The same applies to everyone else's work, including things that are free to read online. Do not include text, images, fonts, exam papers or other sellers' templates you do not have the right to use. State your own licence clearly on page two. **This is general guidance, not legal advice — for a real dispute, consult a qualified local lawyer.**

How do I deliver the file?

Three methods, and use two of them. A Google Drive folder with view access works well for template packs and Sheets files. A private Telegram channel works well for guides and study material and gives you a channel to every buyer.

A direct file send plus a permanent link works for single-file products. Deliver the moment you have confirmed the payment in your own app, using the delivery message in 7.4.

Is it worth it for $1.25?

At $1.25 one sale buys about two 2 GB monthly data bundles. Thirty sales is $35. Whether that is worth it depends entirely on what it cost you to build — and the arithmetic changes completely with the second product, because the audience already exists and the build is faster. What is not worth it is spending three months building something that 30 people would have paid $1.25 for, and never sending the fifty messages that would have found them. **The price is rarely the problem. The number of people who know the product exists usually is.**

CLOSING

How to Spot a Fake Opportunity

Digital products attract scammers for one reason: the seller is already thinking about money, and often already desperate for it. Here are the specific patterns aimed at people like you, and the rules that defeat each one.

1. The "publish your ebook and earn forever" course

The pitch: Pay for a course that teaches you to publish an ebook that earns while you sleep. Screenshots of earnings. Testimonials you cannot verify. Sometimes a countdown timer.

Why it is wrong: Digital products are not passive income. They need a validated problem, a finished product, a sales page, a working payment route and fifty people who know it exists. Nobody can guarantee what you will earn, and anyone who does is either lying or selling you the dream rather than the method.

The rule: If a course promises an income figure for digital products, it is not a course about digital products. It is a course about selling courses.

2. Platforms that charge you a listing fee before you have sold anything

The pitch: "List your ebook on our platform for $9 and reach thousands of buyers." Or an annual membership that supposedly gets you featured.

Why it is wrong: A real marketplace earns a percentage when you sell, so its incentive is to help you sell. A platform that charges you up front has been paid whether you sell or not. Some legitimate marketplaces do charge listing or subscription fees — but you should pay those only after you have already proven you can sell, and only to a company you can verify.

The rule: Never pay to list before your first sale. Confirm the company exists, find real sellers on it, and read the refund terms before paying anything.

3. Fake publishers asking for an upfront contribution

The pitch: A publisher or "agency" offers to publish your book, print it, promote it, and share the profits — if you contribute a fee first.

Why it is wrong: Legitimate publishers pay authors, not the reverse. If you are paying, you are the customer, not the author, and the promised distribution may be nothing more than a listing nobody visits.

The rule: Money flows toward the creator in a real publishing deal. If the flow is the other way, walk away.

4. Crypto and investment schemes dressed as a digital business

The pitch: A Telegram group where you "invest" and earn daily returns, sometimes described as an "e-library", "digital asset", or "content fund".

Why it is wrong: The your central bank or financial regulator drew a red line on virtual assets in a public notice on 23 July 2026: use, purchase, sale, exchange, transfer, trading, settlement and facilitation of virtual-asset transactions are prohibited where you live unless expressly authorised. your regulator also warns that unregulated virtual-asset activity exposes people to fraud, cyber threats and significant financial losses.

The rule: Never use crypto to receive payment or to move money. It is prohibited, and it is also the most common wrapper for a scheme where the early joiners are paid with the later joiners' money.

5. Telegram groups that require a deposit to join

The pitch: A "premium sellers group" or "buyers network" that asks for a deposit or a joining fee, promising access to buyers, suppliers or contracts.

Why it is wrong: The deposit is the product. Once you pay, the group either goes quiet or asks for another payment at the next level.

The rule: Never pay to join a group that promises you buyers. Real buyers come from your own outreach and from referrals you can trace.

6. Buyers who send a fake payment screenshot

The pitch: A buyer sends a screenshot showing a completed transfer, often for more than the asking price, sometimes with an urgent story — "I sent it, please send the file quickly, I am travelling".

Why it is wrong: Screenshots are trivially edited, and a small image is enough to make a seller deliver in a hurry.

> **THE RULE THAT DEFEATS THIS PERMANENTLY**
>
> **Confirm the money in your own wallet or bank before you deliver the file.** Not a screenshot. Not a forwarded message. Not a reference number on its own. Open your own app, see the amount, check the sender's name, and then deliver. Apply this to everyone — including people you know, and especially to anyone who is rushing you. The urgency is the technique.

7. Identity-document harvesting

The pitch: Something needs your ID: a "verification" to receive payment, a "registration" for a platform, a "publisher" confirming you are the author, or a "buyer" who claims they need your ID to complete a transfer.

Why it is wrong: Photographs of your ID, your wallet PIN, and above all your one-time codes let someone take over your accounts. The documented Telegram account-takeover scam where you live follows exactly this pattern: scammers pose as Telegram security staff, harvest passwords and one-time codes, seize the account, and then message the victim's contacts asking for money.

> **NEVER SHARE A ONE-TIME CODE WITH ANYONE**
>
> No legitimate platform, bank, wallet provider or buyer ever asks for your OTP, your PIN, or your password. There is no exception to this. If someone asks, they are attempting fraud, however official they sound and whichever logo they use.
>
> Be equally careful with photographs of your ID. Send one only to an organisation you contacted yourself, through their official channel.

8. What the your central bank or financial regulator says

your regulator's own customer fraud awareness campaign states that fraudsters increasingly use platforms such as WhatsApp, Telegram, Facebook, email, SMS and unsolicited or fake phone calls to impersonate individuals and request urgent financial transfers. It cites your regulator your financial-consumer-protection law and the Financial Consumer Protection Directive No. FCP/01/2020.

Report fraud to `your regulator's complaint address` or call `6230`. your regulator also states plainly that providing or using unlicensed money remittance and transfer services is illegal and punishable under local law.

The 8-point scam checklist

- [ ] Someone promised me a specific income figure for selling digital products. **Stop.**
- [ ] I am being asked to pay a listing fee, membership fee or deposit before I have made a single sale. **Stop.**
- [ ] A "publisher" or "agency" wants money from me to publish or promote my work. **Stop.**
- [ ] The opportunity involves crypto, tokens, or "daily returns" of any kind. **Stop — virtual-asset activity is prohibited where you live unless expressly authorised.**
- [ ] Someone is rushing me to deliver a file because they have "already sent" the money. **Stop — confirm in your own app first.**
- [ ] Anyone has asked me for my PIN, my password, or a one-time code. **Stop — never share these with anyone.**
- [ ] Someone asked for photographs of my ID to "verify" me for a payment or a platform I did not contact myself. **Stop.**
- [ ] I am being told to fake my country, use a VPN, or use someone else's account to receive money. **Stop — this is illegal and it puts every dollars at risk.**

If you have already sent money or shared a code, act immediately: contact your bank or wallet provider, change your passwords, and report to your regulator at the contacts above. Speed matters more than embarrassment.

Sources & Further Reading

Where research could not verify a fact, this book says so in the text and tells you to check it yourself. Those gaps were left as gaps deliberately.

CLOSING

Final Checklist

Work through this in order. Do not tick an item you have not actually done.

Before you build

- [ ] I wrote down ten questions people asked me in the last 30 days.
- [ ] I identified one question raised by at least three different people.
- [ ] I wrote a problem statement using the formula in 2.3, with a named group and a named cost.
- [ ] I can name 20 people who fit my target group without hesitating.
- [ ] I checked whether this problem is already solved for free, and I can say why someone would pay me anyway.
- [ ] I sent the validation message individually to ten people.
- [ ] At least three people said they would pay, and at least one asked the price.
- [ ] I wrote down the exact words people used to describe the problem.

Building the product

- [ ] I chose one of the nine product types deliberately, not by accident.
- [ ] I wrote a hard cap — pages, files or items — and I have not exceeded it.
- [ ] My product has a cover, a quick start, a core method, worked examples, a template or worksheet, and a closing checklist.
- [ ] My core method is five steps or fewer.
- [ ] Every number, formula and factual claim in the file has been verified by me.
- [ ] I checked that no text, image, font or exam paper in the file belongs to someone else.
- [ ] I added a credits line for anything I did not create.

Pricing, licence and the sales page

- [ ] My price sits inside a band from section 5.3, and I can explain why.
- [ ] I have written down the price I will charge after my first ten buyers.
- [ ] My licence paragraph is on page two and says clearly whether use is personal, business or team.
- [ ] My sales page has all eleven elements from 5.4.
- [ ] My sales page includes a "what it is not" paragraph.
- [ ] My sales page states the price, the payment number, and exactly how delivery happens.
- [ ] My sales page contains no income claims, no fake scarcity and no invented testimonials.

Money and delivery

- [ ] I have tested receiving money into my own wallet or bank account.
- [ ] I can see the sender's name and the amount in my own app.
- [ ] I know my two-factor authentication works above $120.
- [ ] I know exactly which route I will offer a buyer outside your country.
- [ ] I will confirm every payment in my own app before delivering, every time.
- [ ] My product file opens on a phone that is not mine.
- [ ] My PDF has selectable text, page numbers and a working contents list.
- [ ] My file is under 5 MB if it is text, or under 15 MB if it has images.
- [ ] My sample PDF is watermarked and does not contain the full product.
- [ ] I have two delivery methods ready, not one.
- [ ] My delivery message includes how to open the file, how to get support, and the refund terms.
- [ ] My refund policy is written and visible on the sales page.
- [ ] My five support reply templates are saved in my phone.

Launch and after

- [ ] My list of fifty names is complete, with a reason next to each.
- [ ] I sent all fifty personal messages, one at a time, not as a broadcast.
- [ ] I posted something genuinely useful in a Facebook group before mentioning my product.
- [ ] My a local classifieds site listing shows the price and real preview images.
- [ ] I published at least three short videos showing the problem my product solves.
- [ ] I asked every buyer for one referral, politely.
- [ ] My launch review table has real numbers in every row.
- [ ] I have recorded every sale with date, name, amount and transaction reference.
- [ ] I have asked my buyers the three questions from 10.1.
- [ ] I created a Telegram channel or an email list so I can reach buyers directly.
- [ ] I chose one of the three next paths from Day 14, in writing.

CLOSING

Final Challenge: Publish Your First Digital Product

Ten days. One product. One live sales page. At least one genuine attempt to make a sale.

READ THIS BEFORE YOU START THE CHALLENGE

Publishing does not guarantee sales. Nothing in this course, and nothing anyone tells you, can guarantee that a buyer will appear. What this challenge guarantees is that you finish — that on Day 10 there is a real product file, a real price, a real payment route you have tested, and at least one real person who has been asked to buy it.

That is the entire point. Most people who want to sell digital products never publish one. If you complete these ten days, you are already in a small minority, and you will have learned more about your market than any amount of reading could teach you.

The rules of the challenge

— One product only. Do not start a second one, and do not switch ideas after Day 05.

— Respect your cap. When you hit it, cut.

— Ten days means ten days. Ship on Day 10 in whatever state the product is in.

— Do the tasks in order. Day 08 does not work if Day 03 was skipped.

— Write your results down. Memory is not a record.

DAY 01 **Pick the problem and write the statement**

OBJECTIVE Stop having a topic. Have a problem with a named group and a named cost.

TASK Write down ten questions people asked you in the last 30 days. Choose the one asked by at least three different people. Fill in the problem statement formula from 2.3.

OUTPUT A single paragraph: group, situation, outcome, obstacle, current workaround, cost, deliverable.

CHECK

- [ ] The group is specific enough that I can name 20 people in it
- [ ] The cost of getting it wrong is money, time or an opportunity
- [ ] Someone else reading it does not have to ask "which people?"

DAY 02 Validate with ten real messages

OBJECTIVE Find out whether this is a real problem before you spend nine days on it.

TASK Send the validation message from 3.2 to ten people individually. Record every answer in a sheet, including the exact words they used.

OUTPUT Ten messages sent, at least five answers recorded.

CHECK

- [ ] Ten individual messages, not a broadcast
- [ ] At least two people described the obstacle in similar words
- [ ] If fewer than three said they would pay, I have changed the idea — not the price

DAY 03 Choose the type, the cap and the price

OBJECTIVE Lock three decisions so you cannot drift for the next week.

TASK Pick one of the nine product types from section 01. Write your hard cap. Pick a price from the bands in 5.3. Write the one-line promise for your sales page.

EXAMPLE "A 20-page guide, $1.50 for Grade 12 students who keep losing marks on the same three question types."

CHECK

- [ ] My type is one of the nine, chosen deliberately
- [ ] My cap is a number, written down
- [ ] My price is inside a band and I can explain why

DAY 04 Build the skeleton

OBJECTIVE Have a document with six headings and the two most important ones filled in.

TASK Create the file. Add: Cover, Quick Start, The Core Method, Worked Examples, Templates, Closing Checklist. Write the Quick Start and the Core Method today.

OUTPUT A file that already contains the two pages that carry the whole product.

CHECK

- [ ] The Quick Start shows a result the buyer could get on day one
- [ ] The Core Method is five steps or fewer
- [ ] An empty heading is waiting where every remaining section goes

DAY 05 Write the core content

OBJECTIVE Get the real substance of the product written, in your own words, with your own local detail.

TASK Write the worked examples with real numbers and real place names. If you use a free AI tool to draft, rewrite every paragraph yourself and verify every number.

OUTPUT Two worked examples with local specifics that a free English article would not have.

CHECK

- [ ] Every number in the file has been checked by me
- [ ] The examples use real local prices, names or situations
- [ ] I have not copied text from any source

DAY 06 Build the template, the licence and the credits

OBJECTIVE Make the file something the buyer uses, and something you can defend.

TASK Add the template, worksheet or checklist. Add the copyright line, the licence paragraph on page two, and a credits line for anything you did not create.

OUTPUT A licensable product, not just a document.

CHECK

- [ ] Page two states clearly what the buyer may and may not do
- [ ] Every asset I did not create is credited
- [ ] A friend reading the licence can say correctly what they are allowed to do

DAY 07 Export and test the file

OBJECTIVE A PDF that behaves properly on a phone that is not yours.

TASK Export to PDF. Check selectable text, page numbers and the contents list. Crop and compress any images. Send it to someone with a different phone and ask them to open it.

OUTPUT A final product file, plus a watermarked sample PDF.

CHECK

- [ ] Text is selectable, not an image
- [ ] Page numbers are present
- [ ] File size is under my target
- [ ] It opened successfully on someone else's phone
- [ ] The sample PDF is watermarked and is not the full file

DAY 08 Write the sales page and test the money route

OBJECTIVE A page that answers eleven questions, and a payment route proven with real money.

TASK Write all eleven elements from 5.4 into a phone note. Then ask a friend to send you $1 to the exact wallet number you will publish, confirm it in your own app, and send it back.

OUTPUT Finished sales text, and a screenshot of a confirmed test payment.

CHECK

- [ ] All eleven elements are present, including "what it is not"
- [ ] Price, payment number and delivery promise are all stated
- [ ] No income claims, no fake scarcity, no invented testimonials
- [ ] I have seen money arrive in my own app

DAY 09 Set up delivery and support

OBJECTIVE Be ready to deliver within minutes of the first payment.

TASK Upload the product to your main delivery method and prepare a second, permanent copy. Save the delivery message, the five support templates and the refund policy in your phone.

OUTPUT Two delivery routes and a support system that answers itself.

CHECK

- [ ] Two delivery methods, both tested by me
- [ ] The delivery message states how to open the file, how to get help, and the refund terms
- [ ] The refund policy is written and will appear on the sales page

DAY 10 Publish, and ask fifty people

OBJECTIVE	The product exists publicly, and real people have been asked to buy it.
TASK	Publish the sales page — a Telegram post, a Facebook post, a Google Doc, a local classifieds site listing, whatever fits your buyers. Then send the personal launch message from 9.2 to your first fifteen names. Add the rest to tomorrow's list.
OUTPUT	A live sales page and fifteen real people asked, personally.

CHECK

- [ ] My sales page is live and anyone can read it
- [ ] Fifteen individual messages sent, each using the person's name
- [ ] I know exactly what I will do the moment someone pays
- [ ] I have written down what I will do if nobody pays

WHAT SUCCESS LOOKS LIKE ON DAY 10

At minimum: a finished product file that works, a sales page that answers the eleven questions, a tested payment route, two delivery methods, a written refund policy, and at least fifteen people who have been personally asked to buy.

Beyond that: a sale. Or three. Or none — and a record of every objection you received, which is the raw material for the version that does sell.

What is not success: a plan, a folder of notes, a half-finished document, or a price you are still deciding. **Publish on Day 10.**

DAY 10 ARITHMETIC — ILLUSTRATION, NOT A PREDICTION

```
15 people asked × 1 in 5 says yes = 3 buyers
3 buyers × $1.50 = $750
```

This is arithmetic on an assumed response rate, not a forecast. The number that matters on Day 10 is not $750 — it is the count of people you asked. Thirty asked and zero sales is information you can act on. Zero asked is nothing at all.

CLOSING

Next Steps

You now have a product, a page, a payment route and a launch sequence. What you do next depends on what your first ten sales told you.

If your problem is that nobody knows you exist

Course 08 — TikTok, Instagram & Telegram Income System. This is the right next course for most readers of this one. It builds the audience and the content system that makes every future product launch start from a warm list instead of fifty cold messages.

Go there if your launch review table shows that your sales came almost entirely from people who already knew you, and you have run out of people who already know you.

If your problem is that building takes too long

Course 03 — AI Income for locals. It covers using AI tools to produce higher-quality work faster across writing, research, design and support — with the same verification discipline this course insisted on in section 04.

Go there if your first product took three weeks and you want the second one to take one.

If you would rather sell your time than a file

Course 09 — The local Online Service Business. If you read this course and realised that what you actually want is to be paid for your skill rather than to package it, this is the honest alternative. Services pay faster than products; products scale further than services. Both are legitimate.

Go there if the validation conversations you had made you realise people want *you*, not a document.

If you want the whole build, end to end

Course 10 — The $500 Digital Business Challenge. The full sequence: product, audience, payment, delivery and the thirty-day push, with the $500 figure clearly labelled as a target and not a guarantee.

Go there if you want one plan that covers everything rather than choosing between the pieces.

ONE LAST THING, SAID PLAINLY

The difference between the people who make this work and the people who do not is not talent, and it is not money, and it is not even the idea. It is that one group publishes something imperfect and asks real people to buy it, and the other group keeps preparing.

You have a problem statement, a product file, a price, a payment number that works, and fifty names you have not messaged yet. **Send the messages.** Everything in this course is downstream of that one action, and no course can take it for you.

Sell digital products from a country with limited payment access. Validate first. Build second. Publish on day ten.

NexKit your country — practical digital skills and income systems built for your country. Every figure in this course is sourced, every example is labelled, and every gap in the evidence is left visible rather than filled with a guess.

08 TikTok, Instagram & Telegram Income System — build the audience for your products

03 AI Income for locals — build products faster, and verify everything

09 The local Online Service Business — if you would rather sell services

10 The $500 Digital Business Challenge — the complete build, start to finish

Sell Digital Products From your country — First Edition · September 2026

Publisher: NexKit your country Editorial Team. This course was written, edited and fact-checked by the NexKit your country Editorial Team. It is not attributed to any individual author, and no personal credentials, photographs or biographies are presented.

What this course is

A practical, your country-specific operating manual for building a small digital product and selling it legally. It covers nine product types, cheap demand validation, fast production, pricing in dollars, the verified payment routes open to a resident of a country with limited payment access, delivery, support, refunds, copyright and licensing, launch without an audience, and how to scale to a second product.

Every figure is traceable to a published source listed in the Sources & Further Reading section, or is clearly labelled as an example.

What this course is not

It is not a promise of income. It is not legal advice, tax advice, or financial advice. It is not a list of guaranteed platform approvals. It does not guarantee sales, buyers, approvals, revenue or results of any kind.

It cannot tell you what a payment provider, platform or government office will decide about your specific case. That depends on your documents, your record and the rules in force on the day you apply.

FINANCIAL AND LEGAL DISCLAIMER

Nothing in this course is a guarantee of income. Any figure that looks like earnings is a **target example or arithmetic illustration, never a prediction**. All prices shown US US dollars (USD) are examples for teaching purposes; the price you can charge depends on your market, your buyers and your product.

You are responsible for complying with local law, tax obligations, platform terms of service, and the requirements of any payment provider or bank you use. Rules, fees, limits and country availability change. Before you rely on a number, a fee or a country list in this course, verify it on the official page yourself.

CURRENCY, DATES AND VERIFICATION

Figures cited in this course are current as of **September 2026**, unless a specific date is given next to the figure. Source URLs for every statistic appear in the Sources & Further Reading section at the back of this course.

your country's payment rules, wallet limits and platform availability are moving quickly. Where this course could not verify a fact, it says so directly and tells you to confirm it yourself. Those gaps are marked in the text, and they were left as gaps on purpose.

EXAMPLES ARE FICTIONAL

Every business, product, sales page, message and price example in this course is invented to teach a method. Where a business name appears, it is labelled **Example scenario — fictional**. No real, recognisable local company is used as a customer, a buyer or a success story anywhere in this course.

What is inside this course

01 · The Nine Product Types, and Which One Fits You 13
02 · Finding a Problem Worth Paying For 20
03 · Validating Demand Before You Build 25
04 · Building the Product 30
05 · Naming, Pricing and the Sales Page 36
06 · Getting Paid where you live — The Honest, Verified Chapter 43
07 · Delivery, Customer Support and Refunds 50
08 · Copyright, Licensing and Not Getting Into Trouble 57
09 · Selling Without an Audience 64
10 · Scaling: The Second Product, the Bundle, Version Two 73

HOW TO WORK THROUGH THIS COURSE

Skim the section dividers first so you can see the whole route. Then work one section at a time and finish the **DO** tasks before moving to the next. The scripts, templates and checklists are meant to be copied, filled in and sent — not admired.
